

Warehouse Areas / Zones – RAG-Friendly Version

Purpose:

Zones in Speed WMS group warehouse locations to facilitate operations such as reception, storage, picking, preparation, and inventory. Each zone type has a specific role in warehouse management. Zones are multi-activity, meaning a zone created in the environment is available for all activities an operator may access.

1. Zone Types and Usage

Zone Type	Speed Code	Description	Exclusivity
Storage Area	STK	Used for location searches; can include any location type.	Non-exclusive (locations can belong to multiple storage areas)
Stock Picking Area	PRS	Used for order preparation launches; checks stock availability.	Non-exclusive
Picking Area on Picking	PRP	Used for order picking; integrates only picking-type locations.	Non-exclusive
Preparation Staging Area	RPR	Supports order mission breaks based on warehouse physical layout.	Exclusive (location belongs to one prep area)
Dynamic Picking Area	PID	Supports dynamic picking processes.	Exclusive
Advanced Picking Area	PIA	Used to manage preparation slabs.	Exclusive
Inventory Area	INV	Used for inventory selection and breaks.	Exclusive
Forklift Operator Zone	CAR	Guides RF operators; lists supports for movement.	Non-exclusive
Compensation Zone	CPS	Used in rotating inventory to manage deviations.	Exclusive

Zone Type	Speed Code	Description	Exclusivity
Workshop Area	ATL	Defines production areas for production order management.	Exclusive
Activity Zone	ACT	Restricts location visibility to a specific activity. Zone name = activity name.	Non-exclusive
Pick to Light Zone	P2L	Supports pick-to-light operations.	Non-exclusive
Staging / Traverse Zone	CHE	Defines picking paths for warehouse traversal.	Non-exclusive

2. Notes

- **Non-exclusive zones:** A location can belong to multiple zones of the same type.
- **Exclusive zones:** A location can only belong to one zone of that type.
- **Zones are reusable across activities,** making configuration flexible and efficient.
