

Build a Formula

Purpose

- Allows users to create custom queries or calculations within SpeedWMS.
 - Example: calculating stock valuation, generating KPIs, or deriving any metric using available fields.
-

Access

- Click on the fx button in the relevant screen or module where formula creation is supported.
-

Steps to Build a Formula

1. **Open the Formula Builder**
 - Click on fx to launch the formula construction window.
2. **Name the Formula**
 - Enter a meaningful name at the top of the window (e.g., Stock Valuation).
3. **Select Fields**
 - Pick the fields you want to use in your calculation.
 - Example: Quantity in stock and Unit price.
4. **Add Operators**
 - Use the mathematical operators provided: +, -, *, /, parentheses ().
5. **Construct the Formula**
 - Example formula for stock valuation:
 - (Quantity in stock) * (Unit price)
 - Steps in the builder:
 - Open a parenthesis (
 - Send Quantity in stock to the formula window
 - Click * (multiplication)
 - Send Unit price to the formula window

- **Close parenthesis)**

6. Validate

- **Click Validate to save and make the formula usable.**

Tips

- **Use parentheses to control calculation order.**
- **You can combine multiple fields and operators to create complex formulas.**
- **Once saved, the formula can be used in reports, dashboards, or data queries within SpeedWMS.**
