

Carrier Allocation

Purpose

- **Automatically assign the correct carrier to orders based on predefined rules and conditions.**
 - **Ensures efficient shipping and reduces manual allocation errors.**
-

Access

- **Menu path: Settings / Transport / Carrier Allocation**
-

Key Components

1. Sequences Tab (Default View)

- **Displays the list of sequences for carrier assignment.**
- **A sequence is a set of conditions that, when met, automatically assigns a specific carrier to an order.**

2. Columns Tab

- **Only headings (fields) that are activated in the Columns tab can be used to define conditions.**
- **Example fields: customer, order type, delivery location, etc.**

3. Creating Sequences

- **Use the Add button or contextual menu to create a new sequence.**
- **Define conditions based on the selected columns.**
- **Partial conditions are allowed: not all fields need to be filled.**

4. Modifying & Reordering Sequences

- **Sequences can be edited or reordered using the arrows in the upper-right corner.**
- **Order matters: sequences are evaluated from top to bottom; the first matching sequence assigns the carrier.**

5. Direct Carrier Assignment from Orders

- **Carrier can also be assigned manually directly from the Orders window, if needed.**

Usage Notes

- **Always ensure the relevant columns are activated before creating sequences.**
- **Proper sequence order ensures priority rules are respected.**
- **This feature can save time for warehouses handling multiple carriers and complex delivery rules.**
