

Creating a Receipt Header

Purpose

- The receipt header is the first step in declaring goods in SpeedWMS.
 - It contains general information about the receipt and precedes the creation of receipt lines.
-

Access

- Accessible via:
 - Contextual menu
 - Add / New receipt button
-

Screen Layout

- The form is divided into two parts:
 1. Upper part → Receipt Header (general info about the receipt)
 2. Lower part → Goods table (where receipt lines will be added)
-

Automatically Initialized Fields

- Current activity → non-editable
 - Speed receipt number → internal counter, non-editable
 - Date and time → defaults to the moment of creation, can be modified
 - Default reception dock → list of dock-type locations configured in the environment
-

Mandatory Fields to Fill

1. Customer account → if the activity is managing customer accounts
2. Third-party supplier code → select from declared third parties in the environment
 - Option to create a new third-party file directly from the selection screen

3. Receipt reference → alphanumeric, optional but useful for easier search

Next Steps

- **After the receipt header is created, receipt lines can be added (see the previous documentation on receipt line creation).**
