

Customer Account Management

Purpose

- Allows an activity to be split by customer account, meaning that all receiving and preparation operations are assigned to a specific customer account.
 - Ensures that data, items, and operations can be segregated per customer.
-

Activation

- Must be enabled in the activity sheet:
 - Access: System → Activity → Double-click on the activity
 - Option to activate Customer account management.
-

Key Features

1. Common vs. Specific Data

- Data (items, third parties, etc.) can be set as common for all accounts or specific per customer.
- Specific data will have their item codes prefixed with the relevant customer account code.

2. Creating Customer Accounts

- Access via: Settings → Third p. → Customer accounts
- Click Add to open the new customer account form.
- Fields:
 - Activity: auto-filled, showing the activity in which the operator is located.
 - Code: unique reference for the customer account.
 - Designation: customer account name.
 - Prefix: alphanumeric (max 5 characters) – used to generate item codes specific to this account.
 - Logo: optional, assign a logo to the account.
 - Coordinates: contact information.

- **Comments:** additional info for order preparation, delivery notes, or billing.
- **Additional Information:** via dedicated tab for further details.

3. System Restart

- **After creating or modifying customer accounts, SpeedWMS must be restarted for changes to take effect.**

4. Diverse Operations

- **Customer accounts can have specific operations assigned, configured in the Diverse Operations section.**

Summary

- **Enables multi-account management within a single activity.**
- **Ensures data segregation, code prefixing, and account-specific operations.**
- **Provides flexibility for customer-specific branding, notes, and operational needs.**
