

Customization of Screens (Views)

- **Purpose:**
Allows users to configure the layout and data displayed on most SpeedWMS screens according to their needs. Each configuration is called a “View”.
 - **User-specific:**
 - By default, views are specific to each user.
 - This means different employees can have different screen configurations for the same functionality.
-

Accessing View Configuration

- **Settings button on the screen opens the view customization interface.**
-

Screen Layout

The configuration screen is divided into three parts:

1. **Left Panel – Available Tables:**
 - Lists all tables with information that can be added to the view.
 - Double-clicking a table expands it to show all elements.
 - Search/filter is available to quickly find elements by keyword.
2. **Right Panel – Current View:**
 - **Upper part:** Shows a preview of the screen with the selected elements.
 - **Lower part:** Provides details about the selected element (black background).
3. **Interaction:**
 - **Add element:**
 - Select the element and click the add button or double-click the element to add it.
 - Added to the last position by default.
 - **Delete element:**

- **Select the column in the upper right panel and click the delete button.**

Advanced Customization

- **Reorder columns: Drag and drop columns to set the display order.**
- **Important note:**
 - **The first column is usually the unique registration key required for system functionality.**
 - **Cannot be deleted or moved, but it can be hidden if needed.**

This system allows each user to have a personalized, optimized workspace while maintaining system integrity.
