

Comments in SpeedWMS: Overview

1 Defining Comments

Comments can be created and standardized in two ways:

A. Comments Tab (Third Party / Settings)

- **Purpose:** Enter comments related to a third party (supplier, recipient, carrier).
- **Use:** These comments appear on preparation, delivery, and reception documents.
- **Note:** To actually print, the chosen report/edition must include a comments field.

B. Comment Codes (Settings / Others / Comment Codes)

- **Purpose:** Define reusable standard comments for radio frequency operations.
- Each comment has a unique code that can be scanned.
- When scanned during preparation or picking, the comment is automatically added to the order/shipment document.
- **Example:**
 - **Code:** FRAGILE
 - **Result:** The shipment label for the order will include “FRAGILE”.

2 Applying Comments

- Comments can be linked to third parties or directly to orders/receipts.
- Radio frequency users can scan the comment code to quickly add a comment.
- Manual entry is also possible from the Comments tab for a third party.

3 Printing Comments

- For comments to appear on preparation slips, delivery notes, or reception documents:
 1. Ensure the report template includes a comments field.

2. Any linked or scanned comments will then be printed automatically.
-

Workflow Example

1. Define comment code: FRAGILE → “Handle with care”.
 2. Link to third party (optional).
 3. During picking: Scan FRAGILE on RF device.
 4. Comment automatically appears on the shipment label.
-

 **Benefit:** Fast, consistent, and error-free communication of special handling instructions across the warehouse.
