

SpeedWMS Functional Coverage

SpeedWMS manages warehouse operations at the location level, supporting both simple and complex processes, including multi-activity management, burst preparation, and radio frequency setup.

1. Warehouse Topography

- **Management by Location:** All types of locations, different area types (dock, reception, preparation, inventory, etc.).
 - **Stock Visualization:** Classic display of stock levels.
 - **Automatic Location Search:** Module to suggest optimal locations for stock.
-

2. Settings

- **Multi-client & Multi-language support**
 - **Up to 5 packaging levels per item**
 - **Traceability configuration:** Batch, FIFO, etc.
 - **Third-party configuration:** Main supplier concept
 - **Delivery settings:** Days, routes, prioritization of articles and third parties
 - **Preparation modes configuration:** Preparation circuits impacting mission generation, document creation, and validations
 - **User & Rights settings**
 - **Printer configuration:** Print edits and orientations
-

3. Receiving

- **Simple receipt process**
- **Reception expectations management**
- **Quantitative & qualitative control**
- **Identification & labeling**
- **Paper or radio frequency-based receipt**
- **Automatic addressing**

- **Run-of-the-river or cadenced reception**
 - **Receipt generation via interface**
 - **Information exchange: Fax, EDI, email**
-

4. Inventory Management

- **Global stock overview: By supplier, quality, condition, etc.**
 - **Stock view by item & by location with filters**
 - **Stock details & movements**
 - **Unit or bulk modification of stock selections**
 - **Movement management: In stock, blocked, expected, in receipt, on order, in preparation, available**
-

5. Order Preparations

- **Order interface management**
 - **Preparation by unit or wave (grouped by recipient, customer, distribution point, etc.)**
 - **Preparation list generation (mock-up)**
 - **Flow optimization by type**
 - **Order visualization with filters (dates, customers, carriers)**
 - **Replenishment of picking locations**
-

6. Shipment Management

- **Document management: Paper or electronic transport documents and delivery notes (EDI, email)**
 - **Tracking preparation progress: By grouping, tour, or pallet**
 - **Route visualization: Geographical map with deadlines**
-

7. Inventory

- **Inventory creation: Choose zones, locations, items**

- **Inventory statements generation**
 - **Seizure: Administrative or radio frequency**
 - **Deviation generation**
 - **Stock validation & updating**
-

8. Complementary Functions

- **Radio Module: Supports reception, storage, preparation, replenishment, picking, inventory, packing, goods call, production & consumption declaration**
- **Interfaces Module**
- **Automatic Location Search Module**
