

SpeedWMS – Import of Locations

Purpose:

- **Enables bulk import of warehouse locations into the system using an Excel file.**
 - **Facilitates faster setup of locations and ensures consistency across the environment.**
-

Access:

- **Menu: Settings → Locations → Import**
-

Process:

1. **Click the Import button to start the process.**
2. **Select an Excel file containing the locations to import.**

Example: Excel file should follow the expected column structure for SpeedWMS locations.

3. **Imported data appears in the Data tab for review.**
 4. **If required, select the separator in the upper-right corner of the Data tab.**
 5. **Switch to the Settings tab to map Excel columns to SpeedWMS fields.**
 6. **Use the Preview tab to confirm all locations before importing.**
 - **Any row with the DNI box checked will not be imported.**
 7. **Click Import (lower-right corner) to finalize the import.**
 8. **The Cancel button can be used to stop the process at any time.**
-

Post-Import:

- **Imported locations appear at the end of the locations list in the SpeedWMS environment.**
- **Templates can be saved for future imports to simplify repeated tasks.**
