

SpeedWMS – Favourites, Shortcuts & Dynamic Menu

Purpose:

- Allows users to organize main actions and functions for quick access.
 - Improves efficiency by providing direct links to frequently used screens.
-

Key Concepts:

Concept	Description
Favourite	Records a view and its active filters. Accessible via the Favourites button in the shortcuts ribbon.
Widget	Any element that can be inserted into the dynamic menu. Must be linked to a Favourite.
Bench	A type of widget representing a Favourite in the dynamic menu. Displays a cumulative view and is clickable to access the screen directly.
Dynamic Menu	The user's welcome screen in SpeedWMS containing different benches/widgets. Appears automatically on application start once configured.
Shortcut	Provides direct access to an operational function of SpeedWMS from the Shortcuts ribbon, based on the current view.

Ribbon – My Shortcuts Section:

Contains three menus to manage favourites and shortcuts:

1. Widget Menu – Manage widgets inserted in the dynamic menu.
 2. Personal Menu – Configure user-specific shortcuts and preferences.
 3. Add a Shortcut – Create direct access to frequently used operational functions.
-

Notes:

- All favourites, widgets, and shortcuts are user-specific.

- **Configuration allows for customized views and direct navigation, improving workflow efficiency.**
