

SpeedWMS – Items Management

Purpose:

- Allows management of all item references declared in the Speed environment.
 - Supports creation, modification, deletion, and import of item records.
-

Access:

- Menu: Settings → Items
-

Available Actions:

1. Display items

- Click Refresh to view the list of items.
- Filters can be applied based on available criteria.

2. Create new item

- Click New to open the item creation window.
- Fill in the item file fields (see General Information below).
- Optionally, import items from .XLS, .XLSX, or .CSV files.

3. Modify existing item

- Double-click an item to view and edit its details.

4. Delete item

- Only possible under certain constraints to avoid data loss.
-

Item File – General Information:

The header remains visible regardless of the tab selected.

Field	Description
Activity	Non-modifiable; corresponds to the Speed activity for which the item was created.

Field	Description
Customer Account	Optional; link item to a customer account.
Customer Item Code	Optional; record the customer reference for the item.
Internal Code	Unique identifier (alphanumeric, max 35 characters). Cannot be modified after creation.
Long Designation	Default long description (alphanumeric, max 128 characters) used in standard editions.
Short Designation	Short description (alphanumeric, max 15 characters) mainly used on radio screens.
Status	Current status: Active (default), Deactivated, End of Life, or New. Disabled items cannot be received or added to orders.
Last Inventory Date	Automatically updated during inventory.
Main Supplier	Optional; associate a third-party supplier for the item.

Additional Functionalities:

Selecting an item also provides access to:

- **Additional Information** – extra details about the item.
- **Diverse Operations** – schedule billable tasks or other item-specific activities.
- **Documents** – manage documents associated with the item.
- **Events** – view item-related history and logs.

Licensing-Dependent Tabs:

- **Certain modules (e.g., Alcohol Management)** may unlock additional tabs when enabled.
- **Example:** When alcohol management is active, the Alcohol tab appears for the item.
