

SpeedWMS – Language Code Configuration

Purpose:

- **Enables the definition of language codes for use at the loading level.**
 - **Helps standardize communication and documentation in multiple languages.**
-

Steps to Create or Modify a Language Code:

- 1. Navigate to Settings → Transport → Language Code.**
- 2. Code: Double-click the field to enter a unique language code (e.g., EN, FR).**
- 3. Description: Enter a descriptive name for the language associated with the code.**

Both fields are required to ensure proper identification of the language.

Notes:

- **Language codes can be referenced in transport documents and system notifications.**
- **Ensure codes are consistent with the organizational language standards.**
