

SpeedWMS – Location Management

Access:

- **Menu: Settings → Locations**
-

Purpose:

- **Displays all locations saved in the environment.**
 - **Enables management of locations for warehouse operations.**
-

Actions Available:

- **Create new locations.**
- **Modify properties of one or more existing locations.**
- **Delete locations (with constraints).**

The location display can be filtered using saved criteria for easier access.

Location Structure:

A location is defined by multiple characteristics:

- 1. Warehouse**
 - 2. Aisle**
 - 3. Column**
 - 4. Level**
 - 5. Slot**
- **Each location has a unique location name, which appears in all screens and reports.**
 - **The location name is flexible and does not need to be a strict concatenation of the characteristics.**
 - **Locations can also be assigned to a site.**
-

Additional Notes:

- **Locations are multi-activity, meaning a single slot is available across all activities the user is connected to in SpeedWMS.**
