

SpeedWMS – Multi-View Management

Purpose:

Enable users to configure and manage multiple views for the same functionality, improving usability and personalization of the interface.

1. Functionality

- **SpeedWMS supports multi-view configuration, allowing a single user to create and maintain multiple screen views for the same module or function.**
 - **All configured views are accessible via the drop-down menu at the top of the configuration screen.**
-

2. Options Available

For each view, users can:

- 1. Create a new view using default columns and settings.**
 - 2. Modify, delete, or duplicate an existing view.**
 - 3. Set a default view for the current screen.**
 - 4. Define a standardized column configuration.**
 - 5. Set filters specific to the view.**
 - 6. Additional configuration options as required.**
-

3. Naming and Navigation

- **Each newly created view is initially named “New view”, followed by a sequential number based on the creation counter.**
 - **The current active view is displayed on the screen.**
 - **Switching between views is easy using navigation arrows.**
-

4. Use Cases

- **Quickly switch between views for different workflows.**
- **Standardize column layouts and filters for teams.**

- **Personalize screens for individual operator efficiency.**
