

SpeedWMS – Place Management

Purpose:

Define and manage the concept of “Place” for transportation in SpeedWMS, ensuring loads are correctly characterized and documented.

1. Definition

- **Place management is a transport characteristic assigned to a load.**
 - **It is defined in the “Transport” tab of the load in SpeedWMS.**
-

2. Functionality

- **Users can create or modify places directly in the table provided within the module.**
 - **The “Mention” field allows free-text comments that may be used for:**
 - **Documentation purposes**
 - **Transport instructions**
-

3. Key Notes

- **Place management ensures proper load classification and can be referenced in transport documents.**
 - **Changes are effective immediately once saved in the system.**
-
