

SpeedWMS – Quality Management

Purpose:

The Quality functionality allows users to define and manage the nature of goods in stock, ensuring that each stock line is assigned an appropriate quality status (e.g., Standard, Non-compliant, Anomaly, Litigation, etc.).

By default, the quality assigned during the receiving process is STD (Standard) unless otherwise specified.

1. Accessing Quality Management

- **Navigate to: Settings → Items → Quality**
 - **The system displays the list of existing quality codes saved in SpeedWMS.**
-

2. Operations

1. Create a new quality code

- **Opens the quality form to define a new code.**
- **Required fields:**
 - **Activity:** Non-editable; identifies the activity the quality applies to.
 - **Quality code:** Unique identifier (alphanumeric, max 5 characters).
 - **Description:** Quality description (max 50 characters).

2. Modify an existing quality

- **Only the description of a quality code can be updated.**

3. Delete a quality code

- **Can be performed with constraints, depending on system rules.**
-

3. Notes

- **Each stock line is automatically assigned a quality when received.**
- **Proper quality assignment ensures accurate stock tracking, reporting, and compliance management.**
