

SpeedWMS – Receipt Closure

Purpose:

The receipt closure step finalizes a SpeedWMS receipt, freezing its information and ensuring no further modifications can be made to the receipt lines or media.

1. Scope of Operation

- **Closure is the final step in the receipt lifecycle.**
 - **Once closed:**
 - **No new media can be added.**
 - **Existing lines cannot be modified or deleted.**
 - **Receipt information remains accessible in a read-only (advisory) mode.**
 - **Attached documents can still be viewed and edited.**
-

2. System Integration

- **If the system requires feedback to the n+1 system, it typically occurs after receipt closure.**
-

3. How to Close a Receipt

- 1. Access the Receipt Management screen.**
 - 2. Use either:**
 - **The contextual menu option “Close Receipt”, or**
 - **The Close Receipt button in the SpeedWMS command bar.**
 - 3. Confirm the closure action.**
-

4. Notes

- **Closure ensures data integrity by preventing accidental modifications to processed receipts.**
- **Closed receipts remain available for reporting and audit purposes.**
