

SpeedWMS – Receipt Generation from Expected Items

Purpose:

This operation allows the user to associate expected items with a receipt and generate the corresponding receipt lines directly.

1. Scope of Operation

- **Receipts are generated purchase order by purchase order.**
 - **Even if multiple expected lines are selected, the entire purchase order is returned to the processing screen.**
 - **Processing multiple purchase orders at once is not supported; the operation must be repeated for each purchase order.**
 - **Accessible via the context menu on the expected items screen.**
-

2. Receipt Line Population

- **All lines from the purchase order are displayed on the screen.**
 - **Editable fields are highlighted in yellow.**
-

3. Managing Expected Quantities

- **For each expected line:**
 1. **Check the quantity to be returned to stock.**
 2. **Modify quantity if required.**
 3. **Tick the TG (“To Generate”) box to mark the line for processing in the receipt.**
 - **Lines already received are automatically ticked as G (“Generated”) and cannot be modified.**
 - **Variable weight items: specify the total weight of the expected quantity.**
 - **Partial receipt: If a quantity lower than expected is received, the line will be split, keeping a remainder for future processing.**
-

4. Receipt Validation

- **Click the Validation button once all lines are reviewed and adjusted.**
 - **The system will present different validation options based on the configuration.**
-

5. Inheritance of Additional Information

- **If additional information was saved on the expected items:**
 - **And inheritance or inheritance mapping is activated,**
 - **These details will appear automatically in the generated receipt.**
-

6. Notes

- **After receipt generation, proceed to stock generation and further processing as per the standard reception workflow.**
- **Refer to the Stock Generation SOP for handling stock movements and updates.**
