

Thirds (Third Parties) – RAG-Friendly Version

Purpose:

Manage all third parties in SpeedWMS, including suppliers, carriers, recipients, contacts, and sites, to support logistics, transport, and order processes.

1. Access

- **Navigate via: Settings → Thirds.**
 - **The interface displays a list of all third parties declared in the Speed environment.**
 - **Tabs organize the thirds:**
 - **Suppliers**
 - **Carriers**
 - **Recipients**
 - **All (common tab showing all thirds)**
-

2. Types of Thirds

1. Suppliers – Used in:

- **Receiving process**
- **Returns and property management**
- **Supplier purchase orders (expected receipts)**

2. Carriers – Used in:

- **Shipping management**
- **Transport planning**
- **Transport label generation**

3. Recipients – Used in:

- **Order preparation**
- **Reservation management**

4. Contacts – Non-logistics related; linked to cases in case management.

5. Sites – Defines start/end points of carrier rounds for transport operations.

3. Third Party Operations

From the Thirds interface, it is possible to:

- Create a new third
- Modify properties of an existing third
- Delete an existing third (with constraints)
- Import thirds from external files

Note: When creating a new third from the All tab, an additional window appears to select the type of third.

4. Third Party Form Fields

Each third party has a form mask that is consistent regardless of type:

- Activity – Non-editable; indicates the Speed activity associated with the third.
- Code – Unique identifier (alphanumeric, max 15 characters). Mandatory.
- Name – Designation of the third (max 50 characters). Mandatory.

Additional tabs may include:

- Delivery address
- Delivery settings
- Classification
- Remarks
- Additional information
- Miscellaneous
- Transfer (for Recipients only)

Licensed modules may add extra tabs, e.g., for alcohol or hazardous materials management.

5. Usage

- Third party data is essential for all logistics operations in SpeedWMS.

- **Suppliers and recipients link to receipts and orders, while carriers and sites support transport planning and execution.**
- **Proper setup ensures accurate document generation, stock handling, and transport management.**
