

Transport Mode – RAG-Friendly Version

Purpose:

Define the different modes of transport available in SpeedWMS to classify and manage shipments efficiently.

1. Overview

- **The Transport Mode is a property of a shipment or load.**
 - **It allows the system and users to identify how goods are moved (e.g., truck, air, rail, sea).**
 - **Proper configuration ensures accurate planning, tracking, and reporting of logistics operations.**
-

2. Access

- **Navigate via: Settings → Transport → Mode of Transport.**
 - **Each transport mode is linked to a shipment under the Transport tab.**
-

3. Configuration

- **Create a new transport mode by entering a unique code and description.**
 - **Modify an existing transport mode directly in the transport mode table.**
 - **Transport modes can be assigned to multiple shipments, supporting standardized reporting and analytics.**
-

4. Usage

- **When creating or updating a load, select the appropriate transport mode.**
 - **The mode of transport impacts:**
 - **Scheduling and routing decisions**
 - **Integration with warehouse and shipment processes**
 - **Reporting and KPI tracking for logistics operations**
-

5. Summary

- **Transport Modes provide a consistent method to classify shipments in SpeedWMS.**
- **They support both operational execution and strategic reporting.**
