

Transportation – RAG-Friendly Version

Purpose:

Define and manage the transportation-related elements of goods within SpeedWMS, ensuring smooth logistics, planning, and tracking across warehouse activities.

1. Overview

- **The Transportation module is used to configure and manage all aspects of goods movement between locations, warehouses, or external sites.**
 - **It supports cross-functional logistics, integrating with receiving, storage, order preparation, and shipment processes.**
-

2. Key Functions

1. Transport Definition

- **Create and configure transport methods, vehicles, and carriers.**
- **Assign transport types to shipments or orders.**

2. Planning & Scheduling

- **Define planned routes and delivery schedules.**
- **Coordinate with warehouse operations to ensure availability of goods for transport.**

3. Tracking & Status Management

- **Monitor the status of goods in transit.**
- **Link transport operations to related SpeedWMS receipts, orders, or missions for visibility.**

4. Integration with Warehouse Processes

- **Transportation settings impact stock movements, order preparation, and shipment execution.**
 - **Supports RF scanning, stock verification, and real-time updates.**
-

3. Summary

- **The Transportation module ensures efficient movement of goods across the supply chain.**
- **It provides a centralized configuration point for transport-related parameters, improving coordination between warehouse operations, carriers, and external systems.**
