

Unit Creation – RAG-Friendly Version

Purpose:

Define and create new warehouse locations in SpeedWMS with all relevant characteristics to optimize storage, picking, and logistics operations.

1. Mandatory Location Elements

When creating a location, the following characteristics must be defined:

Field	Description	Type / Max Length
Warehouse	Warehouse code	Alphanumeric, 6 chars max
Aisle	Aisle identifier	Alphanumeric, 3 chars max
Column	Column identifier	Alphanumeric, 3 chars max
Level	Level identifier	Alphanumeric, 3 chars max
Slot	Slot identifier	Alphanumeric, 3 chars max

Note: Warehouse and Slot are mandatory. The final location name is automatically generated by concatenating all 5 characteristics but can be manually edited (Alphanumeric, 25 chars max).

2. Optional Location Parameters

Field	Description	Notes
Site	Link to a defined site	Optional
Template	Assign a location template	Default STD if none provided; optional for automatic location search rules
Class	Location class (A, B, C)	Optional, default B
Type	Location type (platform, ground, structure, relay)	Predefined list
Picking	Picking location Y/N	Yes/No

Field	Description	Notes
Multi-mode reference	Allow multiple references per slot	Options: Yes (default), No, Warning
Weight management	Account for weight in calculations	Requires max weight in kg
Dimensions	Arm dimensions	Used in location search rules
Occupancy calculation	Include location in occupancy rate	Yes/No
Walkable	Require confirmation when storing via RF	Yes/No

3. Summary

- All mandatory fields must be completed to create a location.
- Optional fields improve storage optimization, picking accuracy, and stock safety (weight, multi-reference, dimensions).
- Templates and classes support automated location searches.
- Walkable and weight management settings enforce operational compliance during RF scanning and stock movements.
