

Loading creation

Feature accessible from the addition button of the ribbon, in the Loading window.

The following entry form will then be displayed on the screen.

The characteristics of a load are divided into several tabs:

- 1.Transportation
- 2.Documentation
- 3.Dock organization
- 4.Traceability
- 5.Mapping
- 6.Additional info

The screenshot shows a software interface for creating a new load. On the left is a sidebar with a 'Load' tab selected. The main area contains a form with the following fields:

- Site:** A search field.
- Carrier:** A search field with 'RAINBOW' selected.
- Model:** A search field with 'SOUTH RD' selected.
- Date:** A date field with '10/08/2022'.
- Code:** A text field with 'Load002'.
- Description:** A text field with 'Loading South road'.
- Transport comments:** A large text area.
- Transport mode:** A search field.
- Forwarding agent:** A search field.
- Loading place:** A search field.
- Departure place:** A search field.
- Unloading place:** A search field.
- Place of delivery:** A search field.
- Dates:** Fields for 'Loading date', 'Departure date', 'Unloading date', and 'Delivery date', each with a calendar icon.

The user can create a new load :

- 1.Select one from the list of templates: all the information saved for the chosen template will then be specified in the corresponding fields. (See section Save as template)
- 2.Create a new loading code

General information should be entered in the upper part of the window. It defines:

- 1.The loading site
- 2.The carrier
- 3.The loading model used for the creation of the loading
- 4.Loading date
- 5.Loading code
- 6.The description of the load

The banner containing these general information remains available for each of the screens dedicated to the different tabs that characterize a load.

Transport

Default home screen, the Transport tab offers the user direct access to all the information related to the transport of the load:

- 1.Transport comments: allows you to enter comments
- 2.Transport mode (Air, Sea etc.)
- 3.Freight forwarder: must be defined at third party level
- 4.Place and date of loading: defined at site level
- 5.Place and date of boarding: defined at the site level
- 6.Place and date of unloading: defined at site level
- 7.Place and date of delivery: defined at the level of the place

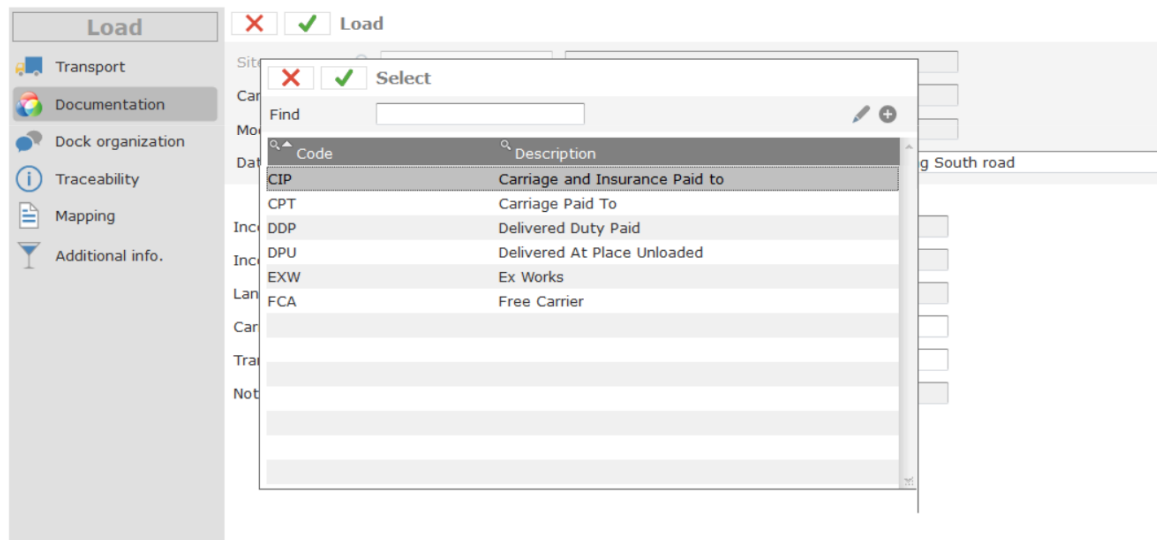

This information available for the searches of the different places is configured at the level of the user.

Documentation

In this screen, the user has access to all the documentary information related to a load:

- 1.The Incoterm

- 2.The place incoterm
- 3.The language: defined in the transport settings
- 4.Transport reference: free information
- 5.Transport doc number
- 6.Notified to: defined at third party level

Dock organisation

In this screen, the user has access to all organizational information related to a shipment:

- 1.Loading dock
- 2.Load duration
- 3.Deposition area
- 4.Schedule code
- 5.Provision time

6.Appointment date

7.Location sorter (sorting lane before loading)

Load [X] [✓] Load

Site: [] []

Carrier: [DPD] [DPD]

Traceability

This tab is used to enter all the loading performance data:

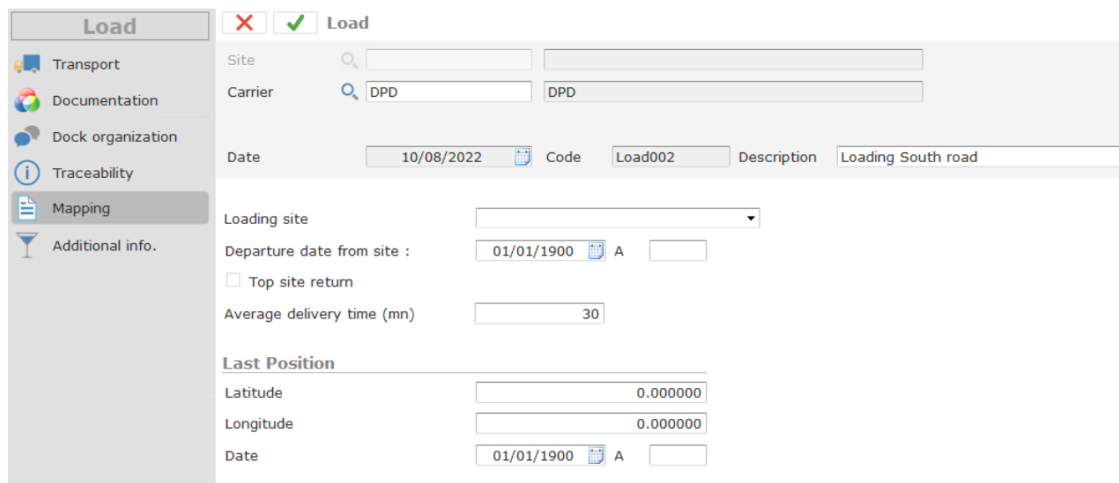

- 1.Truck arrival date and time
- 2.Truck departure date and time
- 3.License plates
- 4.Drivers name
- 5.Filling
- 6.Controller
- 7.The person who loads

The screenshot displays the 'Load' tab interface. On the left is a sidebar with icons and labels for 'Transport', 'Documentation', 'Dock organization', 'Traceability' (which is highlighted), 'Mapping', and 'Additional info.'. The main area is titled 'Load' and contains several input fields and buttons. At the top, there are buttons for 'X' (cancel) and a green checkmark (confirm), followed by the word 'Load'. Below these are fields for 'Site' (with a search icon), 'Carrier' (with a search icon and the value 'DPD'), 'Date' (with a calendar icon and the value '10/08/2022'), 'Code' (with the value 'Load002'), and 'Description' (with the value 'Loading South road'). Further down are fields for 'Arrival Date' and 'Departure date', each with a calendar icon and a dropdown menu set to 'A'. Below these are three large text input areas labeled 'Plates', 'Drivers', and 'Filling'. At the bottom are two fields for 'Controlled by' and 'Who loads', each with a search icon and a dropdown menu.

Mapping

This tab allows you to enter information that will display the load delivery route on a Google map:

- 1.Loading site
 - 2.Date and time of departure
 - 3.Top return site
 - 4.Average time per delivery (in min)
 - 5.Information related to the last position of the truck (normally entered by interface):
- .Latitude
 - .Longitude
 - .Date and time of transmission of information

The screenshot shows a software interface titled "Load" with a sidebar menu on the left containing "Transport", "Documentation", "Dock organization", "Traceability", "Mapping" (highlighted), and "Additional info.". The main area contains several input fields:

- Site**: A search bar with a magnifying glass icon.
- Carrier**: A search bar with a magnifying glass icon, showing "DPD".
- Date**: A date picker showing "10/08/2022".
- Code**: A text field showing "Load002".
- Description**: A text field showing "Loading South road".
- Loading site**: A dropdown menu.
- Departure date from site**: A date picker showing "01/01/1900" and a time field showing "A".
- Top site return**: A checkbox.
- Average delivery time (mn)**: A text field showing "30".
- Last Position**: A section with three fields:
 - Latitude**: A text field showing "0.000000".
 - Longitude**: A text field showing "0.000000".
 - Date**: A date picker showing "01/01/1900" and a time field showing "A".

If this tab is not filled in, the default values of the mapping will be taken into account.

Additional info.

This tab enables to see additional information linked with the load.
