

Loads management

Functionality accessible from the *Shipping / Loading* menu.

This feature allows to view all managed uploads.

The visualization of loads is divided into two configurable parts :

1.The upper part of the window displays the loading headers with their different statuses (Created, In progress, Loaded, Shipped)

2.The lower part of the window allows you to view their content:

1.Affected orders/supports

2.Associated supports

By default the loadings are multi-activity. However, it is possible to deactivate the option in the global settings of the Shipping in order to see only the loadings of the current activity:
