

Project: L'ORÉAL

Feature: Inheritance of Additional Information from AEN Header to REE Header

Environment: PR1_MAR_CoMa_Speed

Version: 1.0

Date: 05/06/2025

Author: IRO

◆ **DOCUMENT METADATA (for Vector DB)**

```
{  
  "document_type": "Technical Specification",  
  "project": "L'OREAL",  
  "environment": "PR1_MAR_CoMa_Speed",  
  "system": "Speed WMS",  
  "module": "Reception - Admin",  
  "feature": "Header Information Inheritance",  
  "source_object": "AEN (Expected Receipt Header)",  
  "target_object": "REE (Receipt Header)",  
  "activation_flag": "ACT_TOP26",  
  "config_file": "Activite.ini",  
  "config_section": "HERITAGE_AEN",  
  "version": "1.0"  
}
```

◆ **SECTION 1 — Business Context**

Within the L'Oréal activity (environment: PR1_MAR_CoMa_Speed),
AGL processes expected returns in Admin mode.

The client uses additional information fields (IC/IV) on expected receipts (AEN) and
wants these values to be:

→ Inherited into the receipt header (REE) when the receipt is created.

1.1 Current Limitation

Standard Speed behavior:

- Inheritance works only:
 - From expected lines → receipt lines
- Only when generating the receipt from the expected document in Admin

It does NOT allow:

- ✗ Header AEN → Header REE inheritance
- ✗ Flexible inheritance via configuration for AEN

Additionally:

- The standard inheritance window must NOT be used.
 - The existing standard inheritance only works for REA (not AEN).
-

◆ SECTION 2 — Objective

Develop a custom entry point that allows:

AEN Header → REE Header inheritance

Based on configuration in:

Activite.ini

Without using the standard Speed inheritance window.

◆ SECTION 3 — Configuration Requirements

3.1 Activite.ini Configuration

The following section must be configured:

[HERITAGE_AEN]

REE_ALPHA5=AEN_ALPHA5

REE_ALPHA6=AEN_ALPHA6

REE_ALPHA7=AEN_ALPHA7

REE_ALPHA10=AEN_ALPHA10

REE_ALPHA11=AEN_ALPHA11

Meaning:

Source (AEN) Target (REE)

AEN_ALPHA5 REE_ALPHA5

AEN_ALPHA6 REE_ALPHA6

AEN_ALPHA7 REE_ALPHA7

AEN_ALPHA10 REE_ALPHA10

AEN_ALPHA11 REE_ALPHA11

⚠ Important Constraint

This inheritance:

- **Must NOT be configured in the standard Speed inheritance window.**
- **Must only rely on the [HERITAGE_AEN] section.**
- **The standard inheritance mechanism only works for REA, not AEN.**

◆ SECTION 4 — Activation Logic

Inheritance is controlled per activity using:

ACT_TOP26

4.1 Activation Rule

IF ACT_TOP26 = 1 THEN

Execute custom inheritance logic

ELSE

No inheritance

ENDIF

Meaning:

- If ACT_TOP26 is enabled → AEN header fields are copied to REE header.
- If ACT_TOP26 is not enabled → no inheritance occurs.

This allows activation per client activity.

◆ SECTION 5 — Functional Process Flow

Step 1 — From Expected Lines (AEN)

Operator selects menu:

Print Delivery Note (Imprimer BR)

Step 2 — User Input

Operator fills:

- BL (Delivery Note Number)
 - Dock (Quai)
-

Step 3 — Receipt Header Creation

Upon validation:

- Receipt header (REE) is created.
 - System checks ACT_TOP26.
 - If activated:
 - System reads [HERITAGE_AEN] configuration.
 - Copies defined AEN header fields into REE header fields.
-

◆ SECTION 6 — Technical Logic

ON Receipt_Header_Creation:

IF ACT_TOP26 = 1 THEN

FOR EACH mapping IN Activite.ini [HERITAGE_AEN]

REE.field = AEN.field

ENDFOR

ENDIF

◆ **SECTION 7 — Functional Summary (RAG-Optimized)**

What is inherited?

Additional information fields (IC/IV).

From where?

AEN Header (Expected Receipt Header).

To where?

REE Header (Receipt Header).

Where is mapping configured?

Activite.ini → [HERITAGE_AEN].

What activates the inheritance?

ACT_TOP26.

When does it occur?

When receipt header is created via “Print BR” from expected lines.

Does it use standard Speed inheritance window?

No.

Does standard inheritance work for AEN?

No — only for REA.

◆ **SECTION 8 — Key Distinctions (Important for RAG)**

Feature	Standard Speed This Custom Logic	
Line → Line inheritance	✓	Not modified

Feature	Standard Speed	This Custom Logic
Header → Header inheritance	✗	✓ (AEN → REE)
Configurable via window	✓	✗
Configurable via Activite.ini	✗	✓
Controlled by ACT_TOP26	✗	✓

◆ SECTION 9 — Client Validation

AGL acknowledges receipt and validates all elements included in this document.

BK Systèmes commits to delivering the solution that meets the validated requirements within the scope of the approved quotation.

Any additional request or evolution beyond this document may require a supplementary quotation.

Any provision not explicitly stated in this document is not covered and remains at the discretion of the concerned parties.
