

Project: L'ORÉAL

Feature: Lot Control in “Prepared Support Control” (Radio Module)

Specification: SPD27

Version: 1.0

Date: 04/06/2025

Author: ZBA

◆ **DOCUMENT METADATA (for Vector DB)**

```
{  
  "document_type": "Technical Specification",  
  "project": "L'OREAL",  
  "system": "Speed WMS",  
  "module": "Radio - Prepared Support Control",  
  "module_code": "CPA0200",  
  "feature": "Lot Control During Prepared Support Validation",  
  "parameter_flag": "ART_LOT1",  
  "activity_flag": "ACT_TOP29",  
  "spec_code": "SPD27",  
  "version": "1.0"  
}
```

◆ **SECTION 1 — Business Context / Functional Need**

1.1 Current Process

Within the L'Oréal project, the client uses the radio module:

Prepared Support Control

This module allows operators to:

- **Scan (flash) a prepared support**
- **Verify the quantities of prepared items**

Currently:

✓ Only quantities are controlled

✗ The lot used during picking is not validated during support control

1.2 Identified Need

If the article manages lot 1 (lot tracking enabled),
the client wants to:

✓ Control the picked lot

✓ Display lot traceability during radio control

✓ Require operator confirmation

1.3 Activation Condition

The functionality is activated through:

ACT_TOP29 – SPEC 27

Scope:

Control lot during prepared support control in:

U-MAR-COMA > MACASLEA1

◆ SECTION 2 — Functional Behavior

The logic applies when flashing an article during prepared support control.

◆ SPECIFIC FLOW — SPD27-1

Trigger

(PE) When the operator scans (flashes) an article.

Step 1 — Check Lot Management

IF ART_LOT1 = 0

→ Standard module behavior

ENDIF

If the article does NOT manage lot1 → no change.

IF ART_LOT1 = 1

→ Open specific traceability window

ENDIF

If article manages lot1 → special control applies.

Step 2 — Traceability Window

System opens a specific window showing:

- List of missions
- Lot traceability for that article

Example:

Article A

Traceability window:

2 × Lot N°1

1 × Lot N°4

Flash 3 articles A

Step 3 — Operator Confirmation

System displays message:

Do you confirm lot conformity? Yes / No

⚠ A physical visual check is performed by the operator.

Step 4 — Decision Logic

Case 1 — YES (Lots Conform)

IF YES THEN

RETURN TO STANDARD (CPA0200)

NEUTRALIZE ARTICLE

ENDIF

Behavior:

- Article validated
 - Continue standard control flow
-

Case 2 — NO (Lots Not Conform)

IF NO THEN

RETURN TO STANDARD

NEUTRALIZE ARTICLE

MARK SUPPORT AS CONTROL KO (at end of process)

ENDIF

Behavior:

- Article neutralized
 - Support flagged as control failure (KO)
-

◆ **SPECIFIC FLOW — SPD27-2**

Additional Functionality

(PE) When pressing F2:

System displays:

Lot of the mission line

Purpose:

- Allow operator to view lot details directly from mission line.
-

◆ **SECTION 3 — Technical Logic**

ON ARTICLE_SCAN:

```
IF ART_LOT1 = 1 THEN  
    DISPLAY TRACEABILITY WINDOW  
    DISPLAY LOT DISTRIBUTION  
    ASK CONFIRMATION (YES/NO)  
  
    IF YES THEN  
        VALIDATE ARTICLE  
    ELSE  
        VALIDATE ARTICLE  
        FLAG SUPPORT = CONTROL_KO  
    ENDIF  
  
ELSE  
    STANDARD CONTROL FLOW  
ENDIF
```

◆ **SECTION 4 — Functional Summary (RAG-Optimized)**

What module is impacted?

Radio – Prepared Support Control (CPA0200)

What activates the feature?

ACT_TOP29 – SPEC 27

What field controls the logic?

ART_LOT1

When does the special control apply?

When ART_LOT1 = 1 (lot-managed article)

What is displayed?

Lot traceability window showing picked lot distribution.

What does the operator do?

Performs physical visual control and confirms conformity.

What happens if lots are incorrect?

Support is flagged as control KO.

What does F2 do?

Displays lot of mission line.

◆ **SECTION 5 — Process Flow Overview**

- 1. Flash support.**
- 2. Flash article.**
- 3. System checks ART_LOT1.**
- 4. If lot-managed:**
 - **Display lot traceability.**
 - **Ask confirmation.**
- 5. Based on response:**
 - **Validate article**
 - **Possibly flag support as KO**
- 6. Continue standard control flow.**

◆ **SECTION 6 — Client Validation**

AGL acknowledges receipt and validates all elements included in this document.

BK Systèmes commits to delivering the solution that meets the validated requirements within the scope of the approved quotation.

Any additional request or evolution beyond this document may require a supplementary quotation.

Any provision not explicitly stated in this document is not covered and remains at the discretion of the concerned parties.
