

Project: L'ORÉAL

Feature: Partial Replenishment for Dynamic Picking (ZPA Transfers)

Version: 1.0

Date: 20/05/2025

Author: ZBA

◆ **DOCUMENT METADATA (for Vector DB)**

```
{  
  "document_type": "Technical Specification",  
  "project": "L'OREAL",  
  "system": "Speed WMS",  
  "module": "Advanced Preparation Zone (ZPA)",  
  "related_module": "MOD131 - Picking Replenishment",  
  "feature": "Partial Support Replenishment",  
  "zone": "LO_ZPA_LOREA",  
  "version": "1.0"  
}
```

◆ **SECTION 1 — Business Context / Functional Need**

1.1 Current Situation

Within the L'Oréal project, the client manages **dynamic picking locations** to organize product transfers from:

- Reserve Zone
→ To
- Advanced Preparation Zone (ZPA)

Currently, Speed allows:

✓ Transfer of **full supports only** during ZPA trigger.

1.2 Identified Limitation

The client needs to:

- Replenish **partial supports**
- Transfer only a specific quantity (not the entire pallet/support)

However:

The current ZPA transfer function automatically generates full support movements.

1.3 Required Evolution

The movements generated by the **ZPA transfer function** must be:

→ Converted into **replenishment mission lines**

This allows:

- Modification of transferred quantity
 - Partial replenishment of picking locations
 - Flexible stock movement
-

◆ SECTION 2 — Functional Objective

Transform:

Transfer Movement → Replenishment Mission Line

So that:

- Quantity can be edited
 - Partial stock transfer is allowed
 - Replenishment follows standard MOD131 logic
-

◆ SECTION 3 — Prerequisites / Configuration

The following setup is required:

3.1 Transfer Configuration for ZPA

The transfer to Advanced Preparation Zone must be properly configured.

3.2 Dedicated ZPA Zone

A zone must exist:

Zone Name: LO_ZPA_LOREA

This zone contains:

- All dynamic picking locations

3.3 Picking Location Configuration

All dynamic picking locations must have:

Picking Flag = 1

This ensures:

- They are recognized as picking locations
- They are eligible for replenishment

3.4 Required Module

Module:

MOD131 — Picking Replenishment

Must be activated and functional.

◆ SECTION 4 — Technical Logic

4.1 Current Behavior (Before Change)

IF ZPA Transfer Triggered THEN

 CREATE Full Support Transfer

ENDIF

Result:

- Entire pallet/support is moved
- No quantity modification possible

4.2 Expected Behavior (After Change)

IF ZPA Transfer Triggered THEN

 CREATE Replenishment Mission (MOD131)

 ALLOW Quantity Adjustment

ENDIF

Result:

- Replenishment mission line created
- User can modify quantity
- Partial support transfer allowed

◆ SECTION 5 — Functional Summary (RAG-Optimized)

What problem does this solve?

Speed only transfers full supports during ZPA trigger.

What does the client need?

Partial replenishment of dynamic picking locations.

What is the solution?

Convert transfer movements into replenishment mission lines.

Which module is used?

MOD131 — Picking Replenishment.

What zone is required?

LO_ZPA_LOREA.

What configuration is mandatory?

Picking locations must have Picking = 1.

What changes technically?

Transfer movement becomes replenishment mission.

◆ SECTION 6 — Process Overview

1. ZPA transfer condition is triggered.
 2. Instead of creating full support transfer:
 - System generates replenishment mission.
 3. User can adjust quantity.
 4. Partial stock is transferred.
 5. Dynamic picking location is replenished.
-

◆ **SECTION 7 — Client Validation**

AGL acknowledges receipt and validates all elements included in this document.

BK Systèmes commits to delivering the solution that meets the validated requirements within the scope of the approved quotation.

Any additional request or evolution beyond this document may require a supplementary quotation.

Any provision not explicitly stated in this document is not covered and remains at the discretion of the concerned parties.
