

Project: L'ORÉAL

Feature: Restriction of Options in Cycle Counting Radio Module

Version: 1.0

Date: 15/04/2025

Author: AKD

◆ **DOCUMENT METADATA (for your vector DB)**

```
{  
  "document_type": "Technical Specification",  
  "project": "L'OREAL",  
  "system": "Speed WMS",  
  "module": "Cycle Counting (Radio)",  
  "process_event": "PE 884",  
  "activity_parameters": ["ACT_TOP22", "ACT_ALPHA12"],  
  "speed_version": "A.8.6.F => 28.06b1",  
  "speed_radio_version": "28.06b"  
}
```

◆ **SECTION 1 — Business Context**

1.1 Functional Context

Within the L'ORÉAL activity, the standard Cycle Counting module is used.

This module:

- Does not rely on a specific inventory zone.
- Does not block storage locations.
- Allows immediate stock updates based on declared quantities.

The radio cycle counting module is used by warehouse teams for stock adjustment, particularly in the following situations:

- When a pallet is found in the warehouse without an assigned location.

- **When consuming or modifying a stock support.**
-

1.2 Business Requirement

Since this module is accessible to all radio operators, the client wants to restrict access to certain options based on the user profile.

Access to specific functionalities must depend on the user group.

1.3 User Group Restriction

Initially:

The USER group will NOT have access to the following options:

- **Modify Quality**
- **Modify Traceability Elements**
- **Modify Packaging**
- **Reset (to be confirmed with client)**
- **New Reference**

The list of user groups concerned will be configured in:

ACT_ALPHA12

Group names must be separated by a semicolon (“;”).

1.4 Standard Options Available in the Module

The standard module includes the following options:

- **Modify Quality**
- **Modify Traceability Elements**
- **Modify Template**
- **Modify Packaging**
- **Reset**
- **Support Label**
- **New Reference**

- **Modify Movement Reason**
 - **Unit Control**
 - **Declare Event**
 - **Modify Variable Information**
-

1.5 Activation Parameter

A specific activity parameter will control whether the restriction logic is applied.

Parameter:

ACT_TOP22

If:

ACT_TOP22 = 1

→ Restriction logic is activated.

If:

ACT_TOP22 = 0

→ Standard behavior (no restriction).

◆ SECTION 2 — Functional Flow (Radio Process)

2.1 Radio Navigation

Step 1

Select:

Cycle Counting

Press:

F5

Step 2

Scan support or location

Press:

F5

Step 3

Enter counted quantity

Then, when clicking to access:

Option Window

2.2 Conditional Behavior

If:

ACT_TOP22 = 1

At the initialization of the option window:

→ Use PE 884 to display only the options allowed for the connected user group.

◆ SECTION 3 — Technical Implementation

3.1 Entry Point Used

Entry Point Description

PE 884 Option window initialization logic

3.2 Technical Condition

When:

ACT_TOP22 = 1

Then:

Use PE 884 to filter visible options.

3.3 Filtering Logic

If the connected user belongs to the group configured in:

ACT_ALPHA12

Then the following options must be hidden:

- **Modify Quality**
 - **Modify Traceability Elements**
 - **Modify Packaging**
 - **Reset**
 - **New Reference**
-

3.4 Logical Flow (Pseudo-Code)

IF ACT_TOP22 = 1 THEN

restricted_groups = GET_VALUE(ACT_ALPHA12)

IF current_user.group IN restricted_groups THEN

HIDE_OPTION("Modify Quality")

HIDE_OPTION("Modify Traceability Elements")

HIDE_OPTION("Modify Packaging")

HIDE_OPTION("Reset")

HIDE_OPTION("New Reference")

ENDIF

ENDIF

◆ SECTION 4 — Functional Summary (RAG-Optimized)

What module is impacted?

Cycle Counting – Radio Module

Which entry point is used?

PE 884

Which parameter activates the restriction?

ACT_TOP22

Where are restricted groups configured?

ACT_ALPHA12

What happens if ACT_TOP22 = 0?

No restriction is applied.

What happens if ACT_TOP22 = 1?

Options are filtered based on the user group.

◆ **SECTION 5 — Client Validation**

AGL acknowledges receipt and validates all elements included in this document.

BK Systèmes commits to delivering the solution that meets the expressed and validated needs within the framework of the approved quotation.

Any additional request or new evolution beyond this document may require an additional quotation.

Any provision not explicitly stated in this document is not covered and remains at the discretion of the concerned parties.

🔥 **Recommended RAG Chunking Strategy**

Here is how you should split it for your vector store:

Chunk 1 — Business Context

Metadata:

```
{  
  "section": "functional_context",  
  "module": "cycle_counting_radio"  
}
```

Chunk 2 — Restricted Options List

Metadata:

```
{  
  "section": "restricted_options",  
  "group": "USER",  
  "parameter": "ACT_ALPHA12"  
}
```

Chunk 3 — Activation Parameter

Metadata:

```
{  
  "section": "activation_logic",  
  "parameter": "ACT_TOP22"  
}
```

Chunk 4 — PE 884 Technical Logic

Metadata:

```
{  
  "section": "process_event",  
  "pe_number": "884"  
}
```
