4 BUSINESS CONTEXT

4.1 Functional Context

Within the L'ORÉAL activity, the standard Cycle Count module is used.

This module:

- Does NOT rely on a dedicated inventory zone.
- Does NOT block warehouse locations.
- Allows immediate stock updates based on declared quantities.

The radio cycle count module is used for stock adjustments, especially when:

- A pallet is found in the warehouse without an assigned location.
- A stock support needs to be consumed or modified.

4.2 Business Requirement

Since this module is accessible to all radio operators, the client requires restriction of certain options depending on the user profile.

Access to specific functionalities must be controlled based on:

👉 The user group of the connected operator.

5 CONFIGURATION PARAMETERS

5.1 Activation Parameter

Parameter	Description
-----------	-------------

ACT_TOP22	Enables or disables option restriction logic
-----------	--

If:

ACT_TOP22 = 1

Then:

→ Option filtering logic must be applied.

If:

ACT_TOP22 = 0

Then:

→ Standard behavior (no restriction).

5.2 User Group Configuration

Parameter	Description
-----------	-------------

ACT_ALPHA12	List of restricted user groups separated by ";"
-------------	---

Example:

USER;TEMP;EXTERNAL

If the logged-in user belongs to one of these groups:

→ Restricted options must be hidden.

OPTIONS MANAGEMENT

6.1 Standard Available Options

The standard radio module includes the following options:

- Modify Quality
 - Modify Traceability Elements
 - Modify Template
 - Modify Packaging
 - Reset
 - Support Label
 - New Reference
 - Modify Movement Reason
 - Unit Control
 - Declare Event
 - Modify Variable Information
-

6.2 Options to Restrict for USER Group

If user group = USER (configured in ACT_ALPHA12), the following options must be hidden:

- Modify Quality
 - Modify Traceability Elements
 - Modify Packaging
 - Reset (To be confirmed)
 - New Reference
-

7 PROCESS FLOW (Radio Synoptic)

7.1 Cycle Count Process

Step 1

User selects:

Cycle Count

Press:

F5

Step 2

Scan:

- Support OR
- Location

Press:

F5

Step 3

Enter counted quantity.

Step 4

When user clicks on:

Options

If:

ACT_TOP22 = 1

Then:

Use PE884 during option window initialization to:

→ Display ONLY authorized options based on the connected user's group.

8 TECHNICAL IMPLEMENTATION

8.1 Entry Point Used

Entry Point Description

PE884 Option window initialization

8.2 Logic – PE884

Condition

IF ACT_TOP22 = 1

Then:

1. Retrieve logged-in user's group
 2. Check if user group exists in ACT_ALPHA12
 3. If YES:
 - Hide restricted options
 4. If NO:
 - Display full standard option list
-

8.3 Filtering Logic (Pseudo-code)

IF ACT_TOP22 = 1 THEN

```
user_group = GET_CONNECTED_USER_GROUP()
```

```
restricted_groups = SPLIT(ACT_ALPHA12, ";")
```

```
IF user_group IN restricted_groups THEN
```

```
  HIDE:
```

- Modify Quality
- Modify Traceability Elements
- Modify Packaging
- Reset
- New Reference

```
ENDIF
```

```
ENDIF
```

FUNCTIONAL SUMMARY (RAG-Optimized)

What triggers restriction?

ACT_TOP22 = 1

Where is the logic implemented?

PE884 (Option Window Initialization)

How are restricted groups defined?

ACT_ALPHA12 (semicolon-separated list)

What happens if user belongs to restricted group?

Certain options are hidden.

Is there any database change?

No.

Is standard inventory behavior modified?

No.

Only UI option filtering is applied.

10 CLIENT VALIDATION

AGL acknowledges and validates all elements described in this document.

BK Systèmes commits to delivering the solution that meets the validated requirements within the agreed quotation framework.

Any additional requests or modifications beyond this document may require a separate quotation.

Any provisions not explicitly stated in this document are not covered and remain at the discretion of the concerned parties.
