

Project: L'ORÉAL

Feature: Shipping Control for Customer Orders in Admin

Version: 1.0

Date: 22/05/2025

Author: ZBA

◆ **DOCUMENT METADATA (for Vector DB)**

```
{  
  "document_type": "Technical Specification",  
  "project": "L'OREAL",  
  "system": "Speed WMS",  
  "module": "Order Administration",  
  "feature": "Shipping Control",  
  "order_type_field": "OPE_ALPHA11",  
  "invoice_field": "OPE_ALPHA07",  
  "status_trigger": "060",  
  "version": "1.0"  
}
```

◆ **SECTION 1 — Business Context / Functional Need**

1.1 Current Situation

Within the L'Oréal project, the client wants to control the “Ship” function from the Admin Order screen.

In the current process:

- When an order reaches status 060,
- A ship confirmation message is sent to the final customer,
- Billing information is transmitted.

If shipping is triggered by mistake before receiving billing information, the physical shipment cannot be performed correctly.

1.2 Identified Risk

If the “Ship” action is executed without invoice data:

- Customer receives billing confirmation
 - Physical shipment may not be possible
 - Process inconsistency occurs
-

1.3 Requested Evolution

All orders of type:

customer_order

Defined in field:

OPE_ALPHA11

Must follow a specific shipping control logic in Admin.

◆ SECTION 2 — Prerequisites / Configuration

The following IC parameters must be configured:

Functional Field Technical Field

Invoice Number OPE_ALPHA07

Order Type OPE_ALPHA11

◆ SECTION 3 — Functional Behavior

The control applies when clicking “Ship” from:

- Validated orders
 - Packed orders
 - Loading screen
-

3.1 Scope Condition

The rule applies only if:

OPE_ALPHA11 = "customer_order"

3.2 Decision Logic

Case 1 — Invoice Number Missing

Condition:

IF OPE_ALPHA07 IS EMPTY

System behavior:

- Display blocking error message:

Impossible to ship: Billing information has not been received.

- Shipping action is prevented.
-

Case 2 — Invoice Number Present

Condition:

IF OPE_ALPHA07 IS NOT EMPTY

System behavior:

- Display non-blocking warning message:

Warning: No modification will be possible after shipment. Do you confirm? Yes / No

- If user confirms → Shipment proceeds.
 - If user cancels → Shipment is aborted.
-

◆ SECTION 4 — Technical Logic

IF order.OPE_ALPHA11 = "customer_order" THEN

IF order.OPE_ALPHA07 IS NULL OR EMPTY THEN

DISPLAY BLOCKING ERROR

STOP SHIPMENT

ELSE
DISPLAY CONFIRMATION WARNING
IF USER_CONFIRMS THEN
PROCESS SHIPMENT
ELSE
CANCEL ACTION
ENDIF
ENDIF

ELSE
STANDARD SHIPPING PROCESS
ENDIF

◆ **SECTION 5 — Functional Summary (RAG-Optimized)**

What is controlled?

The “Ship” function in Admin.

Which orders are impacted?

Orders where OPE_ALPHA11 = "customer_order".

What field is checked?

OPE_ALPHA07 (Invoice Number).

What happens if invoice number is missing?

Blocking error. Shipment is not allowed.

What happens if invoice number exists?

Warning message. User must confirm.

Why is this needed?

To prevent ship confirmation (status 060) before billing data is received.

◆ **SECTION 6 — Impacted Process**

1. User clicks “Ship”.
2. System checks order type.
3. If customer_order:
 - Verify invoice number.
4. Apply blocking or confirmation logic.
5. Proceed or stop shipment.

◆ **SECTION 7 — Client Validation**

AGL acknowledges receipt and validates all elements included in this document.

BK Systèmes commits to delivering the solution that meets the validated requirements within the scope of the approved quotation.

Any additional request or evolution beyond this document may require a supplementary quotation.

Any provision not explicitly stated in this document is not covered and remains at the discretion of the concerned parties.
