

Project: L'ORÉAL

Feature: Sorting Logic Modification in Multi-Order Picking

Module: MOD11

Screen: PMC0300

Version: 1.0

Date: 08/07/2025

Author: ZBA

◆ **DOCUMENT METADATA (for Vector DB)**

```
{  
  "document_type": "Technical Specification",  
  "project": "L'OREAL",  
  "system": "Speed WMS",  
  "module": "MOD11 - Multi-Order Picking",  
  "screen": "PMC0300",  
  "feature": "Mission Line Sorting Modification",  
  "activation_flag": "ACT_TOP31",  
  "version": "1.0"  
}
```

◆ **SECTION 1 — Business Context / Functional Need**

1.1 Current Context

As part of the L'Oréal project, the client uses:

MOD11 – Multi-Order Picking

Within screen:

PMC0300 – Picking Details Screen

This screen displays mission lines (picking tasks).

1.2 Current Sorting Logic

Today, mission lines are sorted as follows:

1. First by Zone (ZEM_CODE)
2. Then by Picking Path Order (MIL_NoOR)

Current Sorting Logic

ORDER BY ZEM_CODE,

MIL_NoOR

1.3 Business Issue

In the client's warehouse layout:

- ZPA rack zone
- Dedicated picking zone

are located:

- In the same aisle
- One above the other vertically

Because sorting prioritizes zone first:

- ✗ The operator may pass through the same aisle multiple times
 - ✗ Picking efficiency is reduced
-

1.4 Requested Evolution

The client wants mission lines to be sorted:

- ✓ Only by picking path order (MIL_NoOR)
- ✗ No sorting by zone

This allows:

- A single physical pass in the aisle
 - Simultaneous picking from both zones
-

◆ SECTION 2 — Functional Behavior

Activation Condition

This specific behavior will only be active if:

ACT_TOP31 = 1

New Sorting Logic (When ACT_TOP31 is Enabled)

IF ACT_TOP31 = 1

THEN

ORDER BY MIL_NoOR

ELSE

ORDER BY ZEM_CODE,

MIL_NoOR

ENDIF

◆ SECTION 3 — Process Flow

1. Operator launches MOD11.
2. Screen PMC0300 displays picking mission lines.
3. System checks:

IF ACT_TOP31 is flagged

4. If flagged:
 - Apply sorting only on MIL_NoOR.
 5. If not flagged:
 - Apply standard sorting (Zone + MIL_NoOR).
-

◆ SECTION 4 — Technical Logic

Standard Logic (Without PE)

ORDER BY ZEM_CODE,

MIL_NoOR

Custom Logic (With PE + ACT_TOP31)

ORDER BY MIL_NoOR

Entry Point Behavior

ON PMC0300_LOAD:

IF ACT_TOP31 = TRUE THEN

 APPLY_SORT(MIL_NoOR)

ELSE

 APPLY_STANDARD_SORT(ZEM_CODE, MIL_NoOR)

ENDIF

◆ SECTION 5 — Functional Summary (RAG Optimized)

What module is impacted?

MOD11 – Multi-Order Picking.

What screen is impacted?

PMC0300 – Picking Details Screen.

What is modified?

Sorting order of mission lines.

What changes?

Sorting is based only on MIL_NoOR instead of ZEM_CODE + MIL_NoOR.

Why?

To allow picking in ZPA rack and dedicated picking zones in a single aisle pass.

How is it activated?

By flag ACT_TOP31.

◆ SECTION 6 — Conditions Matrix

ACT_TOP31 Sorting Logic Applied

0 (Not flagged) ZEM_CODE, MIL_NoOR

1 (Flagged) MIL_NoOR only

◆ SECTION 7 — Client Validation

AGL acknowledges receipt and validates all elements included in this document.

BK Systèmes commits to delivering the solution that meets the validated requirements within the scope of the approved quotation.

Any additional request or evolution beyond this document may require a supplementary quotation.

Any provision not explicitly stated in this document is not covered and remains at the discretion of the concerned parties.
