1.0	Initial Version	25/03/2023	AKD

- **4. Context**

Within the scope of the L'ORÉAL activity, we use the multi-BL reception module for receiving various items.

However, it sometimes happens that certain information, such as dimensions (length, width, height) or weight, are not entered in the item master.

The client wishes that if at least one of the three dimensions is not entered, the operator should be required to complete them directly from the multi-BL reception module. The same applies to weight.

Furthermore, for certain items, during their first reception, we do not know if they are subject to lot 1 management or expiration date (DLC) management.

The client also wishes to be able to enter case and pallet handling units. If the value is > 0, then we will additionally activate management of this handling unit.

The client also wishes to implement an option in the multi-BL reception module that will allow, during this first reception, to define whether the item is concerned by lot 1 management and/or by DLC.

Finally, a specific parameter must be activated at the activity level to apply or not these controls. For this, we will use ACT_TOP16.

• 5. Flowcharts

Action	Radio Screen
1.0 Select: Multi BL Reception Press: F5	[Image: Multi BL Reception selection screen]
2.0 Select/Scan reception or BL reference Press: F5	[Image: Reception/BL selection screen]
3.0 Scan support or F5 to auto-generate a sequential support (depends on configuration) Press: F5	[Image: Support generation screen]
4.0 Scan item code or EAN	[Image: Item code/EAN scan screen]
5.0 Enter received quantities	[Image: Quantity entry screen]
6.0 At F5: Use PE 602 before stock generation → If ACT_TOP16 activated → If at least one unit dimension not entered, display a specific window with dimension entry → If weight not entered, add to the specific window entry of item weight unit → If first reception of item in the activity, add a checkbox for lot1 management and a second checkbox for DLC management → Similarly if first reception, add ability to enter quantity per case and quantity per pallet or cases per pallet depending on whether case is managed or not → At F3 of specific window, return to quantity entry screen without generating stock	[Image: Specific data entry window]
7.0 Scan next support	[Image: Next support scan]

• 6. Technical Section

In PE 602 and PE 794, control that ACT_TOP16=1 before performing processing. No activity-level control to perform.

First, if we are on the first reception of the item, across all receptions in the activity, display the possibility to manage or not lot 1 and DLC, and also the possibility to enter quantity per case and per pallet.

Then we will verify if dimensions are properly entered for the item per unit. We must ensure that ART_LONU, ART_LARU, and ART_HAUU are properly entered and greater than 0.

Finally, we must verify that the item weight per unit is properly entered and greater than 0.

Speed	Version:	A.8.6.F	⇒	28.06b1
Speed	Radio			28.06b
Module STD 175: 28.06				

- **6.1 PE794**

If first reception of item:
 → Display possibility to activate item for lot1 and DLC
 → Entry of quantity per case/pallet:

- If case quantity > 0, then we consider that we manage cases. The quantity entered will be in units per case.
- If pallet quantity > 0 and case quantity > 0, then quantity entered is in cases per pallet.
- If pallet quantity > 0 and case = 0, then quantity entered is in units per pallet.

Remember to update the unit if it's in cases or units as below: from the moment quantity equals 0, we will always have unit by default. If VL case > 0, then at pallet level we will have number of cases.

→ If first-time reception of item, update ART_LOT1 and ART_DLC (if activated, set to 1, otherwise set to 0)

Remember to update ART_PREP if ART_LOT1 managed and ART_DLC managed as below:
 → If ART_LOT1 managed and if ART_DLC managed then: If an item manages lot, we must consider that it manages optimal use-by date as well as manufacturing date.

- ART_PREP1 = STK_DLC & ART_DDLC=1
- ART_PREP2 = STK_DLUO & ART_DLUO=1
- ART_PREP3 = STK_DAEN
- ART_PREP4 = STK_LOT1 & ART_LOT1=1
- ART_PREP5 = STK_DFAB & ART_DFAB=1

→ If ART_LOT1 NOT managed and if ART_DLC managed then:

- ART_PREP1 = STK_DLC & ART_DDLC=1
- ART_PREP2 = STK_DAEN

→ If ART_LOT1 managed and if ART_DLC NOT managed then:

- ART_PREP1 = STK_DLUO & ART_DLUO=1
- ART_PREP2 = STK_DAEN
- ART_PREP3 = STK_LOT1 & ART_LOT1=1
- ART_PREP4 = STK_DFAB & ART_DFAB=1

In Speed, we cannot manage traceability without it being entered in ART_PREP. Remember to update ART_PREP entered with STK_LOT1 and STK_DLC in case of non-management of these options.

If F5, then PE must return true.
If F3, then PE must return false.

- **6.2 PE602**

If ACT_TOP16=1:
Use PE602:
IF ART_LONU=0 or null OR ART_LARU=0 or null OR ART_HAUU=0 or null:
→ If at least one of the three values is 0 or null, then display entry of the three dimensions and initialize with already entered value if one is available.

IF ART_POIU=0 or null:
→ Display weight entry

At F3, lose entry and return to quantity reception entry screen.
At F5:
→ If dimensions displayed, verify that all three entered values are >0
→ If weight displayed, verify that it is >0

- **7. Client Validation**

The company AGL acknowledges receipt and validates all elements contained in this document.

BK Systèmes commits to providing the solution that meets the needs expressed and validated in this document within the framework of the proposed quotation.

The company AGL recognizes that any additional request or any new evolution requested in relation to this document may be subject to an additional quotation.

All provisions not expressly stipulated in this document are not covered and remain at the discretion of the concerned parties.
