

Creation of a Manufacturing Order (MO)

Access

- **Menu: Manufacturing → Manufacture**
 - **Click the Addition button in the ribbon to create a new MO.**
-

Structure of a Manufacturing Order

An MO consists of two main parts: Header and Lines.

1 Header

The header contains essential information for the MO:

Mandatory fields:

- 1. MO Reference – unique identifier of the manufacturing order.**
- 2. Product Reference – the finished product to be manufactured.**
- 3. Quantity – number of units of the finished product to produce.**

Optional fields:

- **Production area**
- **Production dates**
- **Traceability elements (lot, serial number, etc.)**
- **Template tick (to save the MO as a template for future use)**

Quantities Summary:

- **Shows the breakdown of total units into different Stock Units (SU) like pallets, packages, and units.**
-

2 Lines (Components)

Each line represents a component needed for the finished product.

Key points:

- **Specify the quantity of the component required per finished product unit.**
- **Choose consumption type:**

- **Automatic** – system deducts components when production is confirmed.
- **Declarative** – user manually declares the consumption.

Serial Number Management:

- If components and finished product manage serial numbers, the MO can inherit serial numbers of components (only for single-unit components).

Tabs available for lines:

- **Particularities** – traceability, tolerances, etc.
- **Replenishment** – picking replenishment info
- **Info** – general information about the line

Line operations:

- **Modify quantity or quality directly via contextual menu**
- **Disable obsolete lines (double-click → Info tab → Tick disabled)**

3 Template Option

- An MO can be saved as a template for future use.
- Activate template mode via the Template tick.
- Obsolete lines can be disabled while keeping the MO as a template.

4 Activation of the MO

The MO must be activated before production can start:

Methods:

1. **Contextual menu (right-click → Activate)**
2. **Change status in Info tab of the MO form**

Info tab also tracks:

- **Date & time of creation, modification, activation, and closing**
- **User who performed each action**

5 Miscellaneous Operations

- Each MO can be subject to additional pre-defined operations (see Miscellaneous transactions section).
