

Creating a Distribution

Access:

Preparation / Distribution

- Orders must be in In Seizure (010) status to create a distribution.
 - Click the Addition (+) button to open the distribution form.
 - The form is divided into several tabs.
-

1 Header Tab

Displayed by default, divided into three main sections:

Section	Purpose
Distribution	Select a distribution template and enter initialization info for the distribution.
External Data	Enter information related to the third-party supplier.
Organization	Fill in delay information and distribution preparation circuit.

2 Lines Tab

- Displays items from the selected distribution template.
- Adjustments via contextual menu:
 - Add new lines using the addition button.
 - Only items for which the selected supplier is the main supplier can be selected.
- Mandatory input per line:
 - Quantity to allocate
 - Weight
 - Traceability
- Distribution methods:
 - Entered Distribution: Manually enter quantities per line based on assigned percentages.

- **Auto Distribution:** SpeedWMS automatically fills line quantities based on the distribution template.
-

3 Recipient Lines Tab

- Displays how the parcels are distributed per recipient.
 - Allows modification of the number of parcels assigned to each recipient.
-

4 Comments Tab

- Enter comments that will appear in the distribution-related documents.
-

5 General Information Tab

- Tracks creation and updates of the distribution.
-

6 Additional Info Tab

- Optional information can be added at different levels of the process:
 - Division
 - Preparation voucher (BP)
 - Delivery note (BL)
 - Label
-

7 Info Tab

- Summary of general information of the current distribution.
-

✓ Key Notes

- A distribution is linked to a template, a supplier, and specific recipients.
- Quantities can be assigned manually or automatically.
- All tabs allow for documentation and traceability of the distribution process.
