

Creating and Modifying an Order

Access

- **Manual creation:** Click the New button in the control bar.
- **Interface creation:** Orders can also be created automatically via external interfaces.

Modifying Orders

- **Orders can be modified only if their status is “In Seizure” (010).**
 - **For orders in advanced statuses, the status must first be reverted to In Seizure using the available operations.**
 - **Double-clicking on an order opens the modification screen.**
-

Order Structure

Orders are made of Header data and Order line data:

- **Order Header:** Contains general information about the order.
 - **Order Lines:** Cannot exist without a header; list of items and quantities for the order.
-

Header Fields

Field	Description
Order number	Internal number; cannot be modified.
Order date	Default is current date; modifiable.
Type	Default: Preparation. Other types: Replenishment, Countermark, Export.
Nature	Blank by default.
Customer account	Customer account, if managed.
Recipient code	Mandatory; links the order to a recipient. Must be selected from third parties of type Recipients or Suppliers.

Field	Description
Ref. contractor	Optional alphanumeric field (50 chars) for sales order reference.
Order index	Default 001; auto-increments per contractor reference.
Third-party reference	Optional alphanumeric field (50 chars) for customer order number.
Carrier code	Optional; defaults to carrier associated with third party.
Grouping code	Optional; defaults to grouping code of third party.
Department	Optional; defaults to department code of third party.
Preparation date	Initialized with Delivery date – recipient delivery time.
Delivery date	Initialized with the first business date for the recipient.
Preparation sector	Defaults to STD file.
Drop-off location	Guides operator where to deposit prepared supports at the end of preparation. Priority order: 1. Order Header Deposition Location 2. Load Deposition Location 3. Third Party Deposition Location 4. General Location (System / Global / Module / Preparation / Shipping)
Delivery data	Initialized from third-party form; fully modifiable.

Order Lines

- The first line is a simplified entry line for items/quantities.
- The bottom table lists all goods in the order, showing what must be taken from stock.
- Adding lines: Multiple methods available (manual, templates, or import).

Key Notes

- Orders cannot exist without a header.

- **Header fields like recipient code, delivery date, and preparation date are critical for processing.**
- **Drop-off location prioritization ensures smooth workflow for RF Storage operations.**
