

Delivery Schedule

Purpose

- **Automatically updates shipment-related information for selected orders.**
 - **Uses preconfigured sequences in the Transport module to manage delivery timings and codes.**
-

Access

- **Menu: Contextual menu after selecting one or more orders in Speed Wallet Entry.**
 - **Settings path for configuration: Settings / Transport / Delivery Schedule.**
-

Functionality

- **Launching the delivery schedule processing can automatically update:**
 - **Preparation Date – when the order should be prepared.**
 - **Delivery Date – expected shipment date.**
 - **Loading Code – code for the transport/load assignment.**
-

How it Works

- 1. Configure the delivery sequences in the Transport settings.**
 - 2. Select the orders to update.**
 - 3. Launch the delivery schedule via the contextual menu.**
 - 4. SpeedWMS applies the configured sequences and updates the order information automatically.**
-

 **Tip: This feature ensures that the delivery planning stays consistent and up-to-date, reducing manual entry errors for dates and transport codes.**
