

Global Changes – Overview

The Global Changes function allows you to modify certain characteristics of multiple orders at once rather than individually.

Access

- **Where:** Contextual menu in the orders portfolio.
 - **When:** After selecting one or more orders in entry (In seizure).
-

Modifiable Fields Globally

You can change the following attributes for all selected orders:

Field	Description
Grouping code	Assign or modify the code used for grouping orders in missions or waves.
Preparation channel	Change the preparation channel used for the order lines.
Preparation date	Update the date when the preparation of the order should start.
Carrier code	Assign or change the default carrier for the order.

Purpose

- Streamlines order management.
- Saves time by avoiding repetitive modifications on multiple orders.
- Ensures consistency in preparation and shipping parameters across selected orders.
