

Order Splitting

Purpose

- **Allows the fragmentation of an order: splitting certain items or quantities into a separate order.**
 - **Useful when you need to process part of an order immediately or for logistical reasons.**
-

Access

- **Contextual menu on the order to be split → select Split Order.**
-

Process

- 1. The system displays:**
 - **The original order**
 - **The quantity for each item reference**
 - 2. User specifies the quantity for the second order in the field:**
 - **"Spread quantity order 2"**
 - 3. Validate the input.**
 - 4. A confirmation screen appears.**
-

Result

- **A second order is created with the specified quantities.**
- **The new order inherits the header information of the original order (customer, delivery details, etc.).**
- **Original order is updated with the remaining quantities.**
