

Order Templates

Access

- **Menu: Preparation → Orders Templates (in the SpeedWMS ribbon)**

Purpose

- **Simplifies order entry.**
 - **Supports set concept: ensures items grouped as a set are handled together during preparation.**
-

Template Management

- **Display all configured templates (customer or supplier orders).**
 - **If no template exists, the system opens the create template screen automatically.**
 - **Options available for each template:**
 - **Create new template**
 - **Modify existing template**
 - **Delete template**
-

Template Details

For each template, you define:

- 1. Template name / code**
 - 2. Description of the template**
 - 3. List of items included in the template, with the quantity for each item**
-

Set Concept

- **By enabling the set option, the template is treated as inseparable:**
 - **During preparation, if any element is in insufficient quantity, the system only allows the preparation of complete sets.**
 - **This ensures all items of a set are included together and prevents partial sets from being processed.**
