

Availability Calculation

Purpose

- **Determines the availability rate of an order based on all selected orders in the calculation request.**
 - **Helps to know if items required for the orders are sufficiently in stock to fulfill them.**
-

Access

- **Available via the contextual menu after selecting the orders in Speed Wallet Entry.**
-

Restrictions

- **Calculation can only be performed on orders:**
 - 1. From the same sector**
 - 2. From the same site**
 - **It is possible to create an “ALL” channel to select orders from different channels.**
-

After Calculation

- **Fields corresponding to the different availability rates are updated on the selected orders.**
 - **These fields can also be added to screen views for easier monitoring.**
-

In short:

- 1. Select orders → Right-click → Availability Calculation**
- 2. Only same sector/site orders allowed (or use ALL channel)**
- 3. Fields updated → Can be displayed in custom views**
