

SOP: Receipt Lifecycle & Stock Generation in Speed WMS

Sensitivity: Internal

Prepared By: [Your Name]

Effective Date: [Insert Date]

1. Purpose

This SOP defines the full lifecycle of receipts in Speed WMS, from importing expected items to closing a receipt after stock generation. It ensures proper consumption of expected items, accurate stock movements, and traceability.

2. Scope

Applicable to:

- **Warehouses:** JetPark, Durban Northbound, and other Speed WMS-managed sites
 - **Processes:** Receiving, receipt creation, stock generation, expected item management
-

3. Tables & References

Object	Table	Key Fields
Receipt Header	REE_DAT	REE_KEYU, REE_NORE, ACT_CODE, REE_TOP1, REE_ETRE
Receipt Line	REL_DAT	REL_KEYU, REE_KEYU, REL_NoSU, ACT_CODE
Stock	STK_DAT	STK_NOSU, STK_NUM13–17, ACT_CODE
Movements	MVT_DAT	MVT_CODE, STK_NOSU, ACT_CODE
Expected Item	EXP_DAT	EXP_NO, ITEM_CODE, QTY, STATUS
Orders	OPE_DAT / OPL_DAT	OPE_NOOE, OPL_NOSU, ACT_CODE

4. Import & Management of Expected Items

4.1 Importing Expected Items

- 1. Navigate to Receiving → Expected**
- 2. Click Import**
- 3. Select Excel file with expected items:**
 - **Columns: Item Code, Quantity, Quality**
- 4. Validate import**
 - **Unknown item codes flagged for review**
 - **Imported lines appear in the Expected Items portfolio**

4.2 Managing Expected Items

- **Display can be header view or portfolio view (System → Global → Module → Expected)**
 - **Actions available:**
 - **Create/modify/delete expected lines**
 - **Associate expected lines with a receipt via context menu**
 - **Adjust quantities or split expected lines if partially received**
-

5. Creating a Receipt

5.1 Receipt Header Creation

- 1. Open Receipt Module → click New Receipt**
- 2. Fill required fields:**
 - **Customer account**
 - **Supplier code**
 - **Receipt reference (optional)**
 - **Receiving dock (default or selected)**
- 3. Auto-populated fields:**
 - **Activity code (non-editable)**
 - **Speed number (REE_KEYU)**
 - **Date/time of receipt**

5.2 Adding Receipt Lines

- Each line represents a storage medium
- Required fields: Item Code, Quantity, Quality
- Traceability fields (Lot1, Lot2, DLC, DLUO) are mandatory if managed
- Owner defaults: Item sheet > Activity > Manual selection

5.3 Modes of Adding Lines

1. Direct Entry: Enter code, quantity, and quality manually
2. Search by Item Code: Right-click → Search, select supplier or “All Suppliers”
3. Grid Pattern: Select item template, fill quantities for multiple references
4. Detailed Entry Form: Access all fields for traceable items
5. Excel Import: Import table with columns Item Code, Quantity, Quality

5.4 Validation

- Validation saves lines to receipt
 - Top Stock Input = 0 by default (not yet in stock)
-

6. Generating Receipt from Expected Items

1. Select expected lines → Right-click → Generate Receipt
2. Only one purchase order at a time can be processed
3. Check and modify:
 - Quantity to generate
 - Tick TG (“To Generate”) for each line
 - Lines already received are ticked G (“Generated”) and cannot be modified
4. Variable weight items: enter total weight for expected quantity
5. Validate → receipt lines created

7. Stock Generation

1. Open Receipt Form → Lines
2. Select lines for stock generation

- Use **Select All** if needed
- 3. Confirm **receiving dock** on header
- 4. Click **Generate Stock** → creates **stock movements**, consumes expected items
- 5. **Top Stock Input field** updated from 0 → 1

Support Status Codes:

Code Meaning

- 01 In place → immediately usable for picking or sampling
- 02 Awaiting placement → not available until moved to location

8. Receipt Closure

1. Open **Receipt Management Screen**
2. Select receipt → **Close Receipt** (button or context menu)
3. Once closed:
 - Receipt **cannot be modified**
 - Lines **cannot be added, deleted, or edited**
 - Advisory and print options remain available
4. Feedback to upstream systems (e.g., ERP) is generally after closure

9. Key Controls & Best Practices

- Only **lines with Top Stock Input = 0** can be generated
- Expected items are consumed during stock generation
- Generated lines **cannot be deleted or edited**
- Validate quantities carefully, especially for **variable weight items**
- Process **one purchase order at a time** when generating from expected items
