

## Receipt generation from an exp. item

This operation allows, in addition to associating the expected with a receipt, to directly generate the corresponding receipt lines.

The receipt is created by purchase order by purchase order. Regardless of the number of expected lines selected, it is always the entire purchase order that will be returned to the processing screen. It will not be possible to process several purchase orders at once, the operation must be repeated for each of them.

This feature is accessible from the context menu expected:

| Act. | Expected item line no. | Expected third code (supplier) | Contractor header ref. | Delivery date | Item code | Expected quantity | Used quantity | Remaining qty to consume | Delivery note reference |
|------|------------------------|--------------------------------|------------------------|---------------|-----------|-------------------|---------------|--------------------------|-------------------------|
|      | 13                     | PAPERMARC                      | O2022-06/01            | 13/06/2022    | G50OXF110 | 1                 | 0             | 1                        | DN002                   |
|      | 12                     | PAPEX SAS                      | PAP2022/001            | 13/06/2022    | G50USB3   | 2                 | 0             | 2                        |                         |

The information that can be modified are those highlighted in yellow.

For each expected line corresponding to goods received, it is necessary to check the quantity to be returned to stock, to modify it if necessary, and to tick the box **TG** (“To generate”) to indicate Speed that the line is to be treated within the framework of the reception.

Lines that have already been received are automatically ticked **G** (“generated”), and cannot be modified.

In the event that one of the items manages the variable weight, it is necessary to specify the total weight of the expected quantity:
