

Topic: Partial Validation of a Replenishment

Access Path: Within the Replenishment Window, right-click on a mission/replenishment line and select the context menu option: "Partially validate the mission".

Purpose: To confirm the completion of only a portion of the total quantity requested in a replenishment task.

Process Steps:

- 1. Enter Completed Quantity:** In the validation window, manually enter the quantity that has actually been replenished and moved to the target picking location.
- 2. Manage Remaining Quantity:**
 - The system will automatically calculate the remaining quantity (original requested quantity minus the validated quantity).
 - **Optional Modification:** You can manually override this automatic calculation. Click the edit icon (pen) next to the "Remaining qty" field to directly enter or adjust the remaining balance.

Result: The replenishment task is updated. The validated quantity is closed, and a new replenishment line is typically created for the remaining quantity to be completed later.
