

Total Validation

Purpose:

- To validate a replenishment line and update the system to reflect that the goods have been processed and the associated support has been moved.

Access:

- Right-click on the Total Validation option after selecting a replenishment line in the Replenishment window.

Effect:

- The selected replenishment line is validated.
- The corresponding support (pallet, bin, etc.) is moved in the system, reflecting that the replenishment has been completed.
