

Storage Validation

Access:

- **Storage tab of the receipt.**
 - **Select the lines to be stored.**
 - **Click Validate Storage (button at the bottom or via the contextual menu).**
-

What Happens During Storage Validation

- 1. The system moves the selected media (pallets, bins, etc.) to their planned location automatically.**
 - 2. The status of the support is updated to:**
 - **01 – Support in place**
 - **This indicates the media is now stored and available for order preparation.**
 - 3. Information for each line is updated in the system after processing.**
-

Key Points:

- **Storage validation finalizes the placement of media in the warehouse.**
- **Only validated media (status 01) can be used for further operations like order picking or preparation.**
