

How to Cancel an Order That Has Already Been Shipped

Overview

Once an order has been shipped, it is assigned **status 070**.

Orders in **status 070 cannot be cancelled or deleted** directly in the Speed system.

To cancel such an order, it must first be **reverted to an earlier status (060)**.

This reversal **must be performed directly in the database** and can **only be done by the Support team**, as they have the required database access.

Step 1: Verify the Order in the Database

Confirm the order details and current status before making any changes.

```
SELECT OPE_KEYU, OPE_NOOE, *  
FROM OPE_DAT  
WHERE ACT_CODE = 'Activity Account'  
AND OPE_NOOE = [Order Number];
```

Step 2: Revert the Order Status from 070 to 060

Update the order status in the database to allow further processing in Speed.

```
UPDATE OPE_DAT  
SET OPE_STAT = '060'  
WHERE ACT_CODE = 'Activity Account'  
AND OPE_NOOE = [Order Number]  
AND OPE_KEYU = [Order Keyu];
```

Important:

This update must be executed by the **Support team**, as end users do not have database access.

Step 3: Invalidate Mission Lines in Speed

After the order status has been reverted to **060**, continue in the Speed application:

1. Navigate to the **Mission** tab.

2. Select the relevant **Mission**.
 3. The **Mission Header** page will open, showing mission metadata.
 4. **Double-click** the mission header to display the **Mission Lines**.
 5. **Invalidate all mission lines**.
 6. If the order has **multiple mission headers**, repeat this process for **each one**.
-

Step 4: Cancel the Mission

- Once all mission lines are invalidated, the order will automatically move to **status 030**.
 - From **status 030**, cancel the mission.
 - After mission cancellation, the order will move to **status 010**.
-

Step 5: Cancel the Order

- When the order reaches **status 010**, it can now be **fully cancelled** in the system.
-

Key Notes for RAG Usage

- Orders in **status 070 cannot be cancelled directly**
- Status **070 → 060** requires a **database update**
- **Only Support** can perform database updates
- **All mission lines must be invalidated** before mission cancellation
- Final order cancellation is only possible at **status 010**
