

Speed WMS SOP Knowledge Base (RAG-Ready Structure)

Document Metadata

System: Speed WMS V8

Purpose: Warehouse operations and replenishment management

Modules Covered:

1. System Login & Navigation
 2. Filters and View Customization
 3. User Rights & Access Management
 4. Basic Data Configuration
 5. Warehouse Locations & Areas
 6. Receiving Goods (Receipts)
 7. Storage Operations
 8. Stock and Movement Tracking
 9. Order Preparation
 10. Shipments and Loading
 11. Inventory Management
-

1. System Login and Navigation

Purpose

Authenticate users and track warehouse transactions performed in Speed WMS.

Procedure: Login to Speed WMS

1. Open the Speed WMS application.
2. Enter the following credentials:
 - **User password**
 - **Access code**
3. Select the **activity (warehouse/customer environment)**.
4. Click **Login**.

System Behavior

Authentication enables:

- Tracking user actions and stock movements.
 - Restricting system access based on user permissions.
 - Applying user-specific system configurations.
 - Access to the customer portal and system updates.
-

2. System Interface and Navigation

Main Interface Components

The main interface contains:

- **Main Menu Bar**
 - Structured according to the warehouse logistics flow.
 - **Fast Action Icons**
 - Quick access to commonly used operations.
 - **Operational Views**
 - Display operational data such as receipts, stocks, orders, and shipments.
-

3. Filters and Data Views

Purpose

Filters allow users to quickly retrieve relevant operational data.

Procedure: Apply a Filter

1. Open the relevant operational view.
 2. Click **Filter Selection**.
 3. Choose the filter to apply.
 4. Click **Show Results**.
-

Procedure: Create a Custom Filter

1. Click **Create Filter**.
2. Enter a **filter name**.
3. Add filter conditions such as:

- Item
- Date
- Status
- Location

4. Save the filter.

Procedure: Customize Display Columns

1. Click **Customize View**.
 2. Select fields from **Available Fields**.
 3. Drag and drop columns to change the display order.
 4. Adjust:
 - Column width
 - Column titles
 - Sorting order
-

Export Data to Excel

1. Apply a filter to retrieve data.
 2. Click the **Excel Export button**.
 3. The system generates an Excel file in the **Speed Excel directory**.
-

Import Data

Supported formats:

- XLS
- CSV

Procedure:

1. Click **Import Data**.
2. Select the file path.
3. Configure **field mapping**.

4. Preview the import.
5. Click **Import**.

4. User Rights and Access Management

Purpose

Restrict system functionality based on user roles.

Core Concepts

Users belong to **Groups** which define their permissions.

Example:

User	Group
------	-------

Dupont	Administrator
--------	---------------

Durant	Reception
--------	-----------

Martin	Stock Management
--------	------------------

Procedure: Create a User Group

1. Navigate to **Group Management**.
2. Create a new group.
3. Assign rights such as:
 - Receipts
 - Stock management
 - Order management
 - Settings modification

Procedure: Create a User

1. Navigate to **User Management**.
2. Create a user profile.
3. Assign the user to a **group**.

4. Assign **activities and system modules**.

5. Basic Data Configuration

Concept: Activity

An **Activity** separates operational environments.

Examples:

Business Type	Activity Example
Manufacturer	Raw Materials / Finished Goods
Retail	Clothing / Frozen Goods / Grocery
Logistics Provider	One activity per customer

Activity Settings

Activity configuration may include:

- Default storage location
 - Default dock location
 - Support status during receiving
 - Operational rules
-

Customer Accounts

Customer accounts separate clients operating under the same process.

Example:

Customer A

Customer B

Data such as **items or suppliers** can be shared using **prefix identifiers**.

6. Item Management

Procedure: View Item Details

1. Open **Items Menu**.

2. Double-click an item.
3. The item configuration screen opens.

Item Configuration Options

Classification

Items can be assigned to a **family** used for:

- Storage location rules
- Order processing rules

Storage Configuration

Define default storage rules for:

- Storage unit (SU)
- Default storage locations
- Support breaking (splitting quantities across pallets)

Order Preparation Rules

Define:

- Picking locations
- Replenishment rules
- Substitution rules if stock is unavailable
- Multiple picking locations

Barcode Management

Assign barcode identifiers per storage unit level.

This allows RF scanners to identify items via barcode instead of item reference.

7. Third-Party Management

Third parties include:

- Suppliers
- Consignees
- Carriers

Information captured:

- Address
 - Opening days
 - Delivery times
 - Business classification
-

8. Warehouse Locations and Areas

Location Creation

Locations can be created:

- Individually
 - In sequence
 - Via data import
-

Location Code Structure

Example rule:

1-02-03-04

Structure may represent:

Warehouse – Aisle – Column – Level

Area Types

Locations are grouped into **Areas**.

Examples:

- Storage areas
- Picking areas
- Preparation areas

- Inventory zones
 - Forklift movement zones
-

9. Receiving Goods (Receipt Process)

Two receiving methods exist.

Method 1: Receipt Portfolio

Receipts are created based on:

- Supplier purchase orders
 - Delivery announcements
-

Method 2: Direct RF Receiving

Items are scanned in real time during receiving.

Procedure: Create Expected Receipt

1. Navigate to **Receipts Module**.
 2. Create a new receipt.
 3. Enter:
 - Item barcode
 - Quantity
 - Quality information
 - Traceability data
-

Procedure: Process Receipt

1. Print **Receipt Bill**.
2. Perform receiving using RF scanner.
3. Scan:
 - Item barcode
 - Storage unit

- Quantity
4. Repeat until all items are received.
-

10. Storage Operations

Storage Methods

Storage may be performed:

- Direct storage
 - Storage via picking area
 - Automatic location search
-

RF Storage Procedure

1. Scan **Support (pallet or container)**.
2. Scan **Storage location**.
3. Confirm storage.

If automatic location search is enabled:

- The system suggests a location.
 - Operator can override or re-search.
-

11. Stock and Movement Tracking

Stock Overview

Stock information includes:

- Item
 - Location
 - Quantity
 - Status
-

Movement Tracking

Each stock movement records:

- Movement type
 - User performing the movement
 - Date/time
 - Location changes
-

12. Order Preparation

Procedure: Create an Order

1. Open **Order Management**.
 2. Click **New Order**.
 3. Enter customer and order details.
-

Add Items to Order

1. Select item.
 2. Enter quantity.
-

Launch Order

Launching an order will:

- Change status to **Launched**
 - Generate **picking missions**
-

RF Order Preparation

1. Open RF **Preparation Mode**.
2. Enter mission number.
3. Scan items and locations.
4. Confirm picks.

Result:

- Mission validated
- Order status updated to **Valid**

13. Shipment and Load Management

Load Creation

1. Open **Load Management**.
2. Create a new load.
3. Enter:
 - Shipment date
 - Carrier

Assign Orders to Load

1. Select **Unassigned Orders**.
2. Add orders to load.

Loading via RF

1. Open RF **Loading Mode**.
2. Scan expected supports.
3. Confirm loading.

If a support is not expected, it cannot be loaded.

Shipping

Final step:

Click **Ship**.

Effects:

- Orders shipped
- Load finalized
- No reversal allowed

14. Inventory Management

Procedure: Create Inventory

1. Open **Inventory Module**.
 2. Create new inventory record.
 3. Enter:
 - Inventory name
 - Type
 - Date
-

Configure Inventory

Select:

- Areas
 - Locations
 - Items
-

Generate Counting Lines

Click **Generate Inventory**.

This creates counting tasks.

Freeze Inventory

Freezing prevents:

- Location changes
 - Stock modifications
-

Inventory Counting

Counting can be performed:

- Manually
- Using RF scanner

Procedure:

1. Scan location.
 2. Scan supports.
 3. Enter counted quantities.
-

Resolve Inventory Discrepancies

System compares:

Recorded stock

vs

Counted stock

Discrepancies generate adjustment movements.

Validate Inventory

Validation:

- Unlocks locations
 - Creates stock adjustment movements
 - Changes inventory status to **Validated**
-

Recommended RAG Chunking Strategy

To improve retrieval accuracy in your **WMS RAG system**, store knowledge in chunks like:

Topic: Receipt Process

Question: How do I receive stock in Speed WMS?

Answer: Step-by-step receipt procedure

Keywords: receipt, receiving, RF, delivery announcement

Example chunk:

Title: Receiving Goods Using RF Mode

Keywords: receipt, RF receiving, scanning items

Steps:

1. Open RF receiving module
2. Scan receipt number
3. Scan item barcode

4. Enter quantity
5. Confirm receipt

Recommended RAG Metadata Fields

For best results in your **SOP RAG application**:

module: receipts

process: receiving goods

system: Speed WMS

operation_type: warehouse operation

keywords: receiving, receipt, RF scan, delivery
