

Procedure: Resolving Serial Number Issues in Speed (e.g., INC0379425)

1. Objective

To resolve incidents where **serial numbers are not associating correctly** in Speed, even though they appear in reports (e.g., SSRS), using database verification and updates.

2. Example Incident

Incident: INC0379425 – Skyworth Durban

Issue:

- 100 serial numbers for 2 pallets (PSD000977 and PSD000984) were not associating in Speed.
- Serial numbers appeared correctly in the **SSRS serial number report**, but not in Speed.

Root Cause:

- Spaces or special characters (e.g., line breaks) were present in the serial number table (NSE_DAT).
 - Speed does not accept special characters in serial number fields.
-

3. Steps to Resolve

Step 1 – Verify Data in Database

Check serial number records in the production Speed database:

```
SELECT NSE_SSCCC, *
```

```
FROM nse_dat
```

```
WHERE NSE_SSCCC LIKE '%PSD000984%';
```

- **nse_dat:** Serial number table
 - **NSE_SSCCC:** Field representing pallet number
-

Step 2 – Identify the Issue

- Look for **spaces, line breaks, or special characters** in the NSE_SSSCC field.
 - Confirm the affected records correspond to the incident pallets.
-

Step 3 – Fix the Issue

Remove unwanted characters using the REPLACE function:

```
UPDATE nse_dat
```

```
SET NSE_SSSCC = REPLACE(NSE_SSSCC, CHAR(10), '')
```

```
WHERE act_code = 'RSADBNWH'
```

```
AND art_code IN ('SKY-HS6409', 'SKY-R012000030', 'SKY-R012000029');
```

- CHAR(10) represents a **line break or special character**
 - Filter by ACT_CODE and ART_CODE to update **only relevant records**
-

Step 4 – Validate the Fix

1. Re-run the SELECT query from Step 1 to confirm that special characters are removed.
 2. Check with **operations** that the serial numbers now **associate correctly in Speed**.
-

4. Notes

- Always **verify the data before applying updates** to avoid impacting unrelated records.
- Maintain an **audit log** of:
 - Pallet/serial numbers updated
 - Database changes made
 - Date/time and operator
- This procedure can be reused for **any serial number issue** caused by unwanted characters.
