

Standard Operating Procedure (SOP)

Title: Replaying Failed Import Files to WMS

Department: WMS JACC

Effective Date: [Insert Date]

Prepared By: [Insert Name]

1. Purpose

This SOP provides step-by-step instructions to replay import files that failed to integrate into WMS via Speed Services.

2. Procedure

Step 1 – Connect to the Production Server

- 1. Launch your Remote Desktop or server access tool.**
 - 2. Connect to the Production Server: PFS03 GMT +2.**
 - 3. Log in with your authorized credentials (work email and MSC password).**
-

Step 2 – Access Speed Services Directory

- 1. Open File Explorer.**
 - 2. Navigate to:**
F:\Interfaces\P-ZAF-CA-S1\WsSpeed
 - 3. Locate and double-click the Speed Services application.**
-

Step 3 – Log into Speed Services

- 1. On the authentication prompt, select:**
“Enter my credentials on the authentic Windows sign-in screen” → Click Yes.
 - 2. Press CTRL + ALT + END.**
 - 3. Select Functions from the menu.**
 - 4. Confirm any confirmation pop-ups by clicking Yes.**
 - 5. The Speed Services homepage will now be displayed.**
-

Step 4 – Authenticate via API

- 1. Navigate to:**
Speed Services → API Calls
 - 2. Set Action to: Authentication.**
 - 3. Enter Support Credentials (case-sensitive, use CAPS):**
 - **LOGIN: SUPPORT**
 - **PASSWORD: CENTRAL**
 - 4. Click the Green Button to generate a token.**
 - 5. Copy and store the token for the next step.**
-

Step 5 – Replay the Failed File

- 1. Change Action to: Linkup : Flux.**
 - 2. Paste the JSON file content into the input field.**
 - 3. Click the Green Button to run the file.**
-

Step 6 – Monitor File Status

- 1. Initially, the system will show Processing.**
 - 2. Wait until the status changes to GO.**
 - 3. When complete, the file status will display Full Integration.**
-

3. Notes & Best Practices

- **Ensure the JSON format is correct before replaying.**
- **If the file fails again, review the callback message for error details.**
- **Use Support credentials only for integration tasks.**
- **Document any repeated failures and escalate to the relevant technical team if unresolved.**
