

Notice: Pending Issue – Missions Loading Before Full Picking (ZAR Commodities)

Please be advised that there is a known and pending issue affecting ZAR commodities, where missions can be loaded even when the full order has not been completely picked.

This behaviour is currently causing operational backlogs and delays.

Current Status

- The issue has been formally escalated to BKS.
- We are awaiting their feedback and a permanent fix.

Temporary Mitigation

While waiting for BKS resolution, a temporary workaround has been implemented:

- A task scheduler runs every 5 minutes to update affected missions.
- This allows missions to be loaded without further operational disruption.

 *This is a temporary solution and should be treated as such.*

Manual Intervention (If Required)

If manual correction is needed, please use the scripts below to identify and update affected missions.

1. Identify Affected Records

SELECT

mil.mil_nosu,

mil.mil_stat,

sex.sex_stsup

FROM mil_dat mil

JOIN ope_dat ope

ON ope.act_code = mil.act_code

AND ope.ope_nooe = mil.ope_nooe

```
JOIN sex_dat sex
  ON sex.sex_act = mil.act_code
  AND sex.sex_supe = mil.mil_nosu
WHERE mil.act_code = 'zar'
  AND mil.mil_stat = '040'
  AND sex.sex_stsup = '020'
  AND ope.ope_stat <= '040';
```

2. Update Mission Status

```
UPDATE sex_dat
SET sex_stsup = mil.mil_stat
FROM mil_dat mil
JOIN ope_dat ope
  ON ope.act_code = mil.act_code
  AND ope.ope_nooe = mil.ope_nooe
JOIN sex_dat sex
  ON sex.sex_act = mil.act_code
  AND sex.sex_supe = mil.mil_nosu
WHERE mil.act_code = 'zar'
  AND mil.mil_stat = '040'
  AND sex.sex_stsup = '020'
  AND ope.ope_stat <= '040';
```

Important Notes

- Always run the SELECT query first to confirm impacted records.
- Apply updates only where conditions are met.
- Keep an audit trail of:
 - Mission number

- **Old status**
 - **New status**
 - **Date/time of update**
- **Perform actions in Test/QA first, where applicable.**
